Dynamic Probabilistic Systems, Volume I Ronald A. Howard, 2007-06-05 An integrated work in two volumes this text teaches readers to formulate analyze and evaluate Markov models The first volume treats basic process the second semi Markov and decision processes 1971 edition **Dynamic Probabilistic Systems, Volume I** Ronald A. Howard, 2012-05-04 This book is an integrated work published in two volumes The first volume treats the basic Markov process and its variants the second semi Markov and decision processes Its intent is to equip readers to formulate analyze and evaluate simple and advanced Markov models of systems ranging from genetics and space engineering to marketing More than a collection of techniques it constitutes a guide to the consistent application of the fundamental principles of probability and linear system theory Author Ronald A Howard Professor of Management Science and Engineering at Stanford University begins with the basic Markov model proceeding to systems analyses of linear processes and Markov processes transient Markov processes and Markov process statistics and statistics and inference Subsequent chapters explore recurrent events and random walks Markovian population models and time varying Markov processes Volume I concludes with a pair of helpful indexes

Holger Hermanns, Roberto Segala, 2003-08-02 This volume contains the proceedings of the second joint PAPM PROBMIV Workshop held at the University of Copenhagen Denmark July 25 26 2002 as part of the Federated Logic Conference FLoC 2002 The PAPM PROBMIV workshop results from the combination of two workshops PAPM Process Algebras and Performance Modeling and PROBMIV Probabilistic Methods in Verification The aim of the joint workshop is to bring together the researchers working across the whole spectrum of techniques for the modeling specification analysis and verification of probabilistic systems Probability is widely used in the design and analysis of software and hardware systems as a means to derive efficient algorithms e.g. randomization as a model for unreliable or unpredictable behavior as in the study of fault

tolerant systems and computer networks and as a tool to study performance and dependability properties The topics of the workshop include specification models and semantics of probabilistic systems analysis and verification techniques probabilistic methods for the verification of non probabilistic systems and tools and case studies The first PAPM workshop was held in Edinburgh in 1993 the following ones were held in Regensburg 1994 Edinburgh 1995 Turin 1996 Enschede 1997 Nice 1998 Zaragoza 1999 and Geneva 2000 The first PROBMIV workshop was held in Indianapolis Indiana 1998 the next one took place in Eindhoven 1999 In 2000 PROBMIV was replaced by a Dagstuhl seminar on Probabilistic Methods in Verification

Testing of Communicating Systems Myungchul Kim, Sungwon Kang, Keesoo Hong, 2013-03-19 The aim of this book is to bring together the research of academics and practitioners in the field of communication systems testing It covers four major topic areas types of testing including conformance testing interoperability testing performance and QoS testing phases of testing including test case generation means of testing test execution and test results analysis classes of systems tested and the theory and practice of testing including test related algorithms practical testing methodology and practical testing experience

Probability and Mathematical Genetics N. H. Bingham, C. M. Goldie, 2010-07-15 Focussing on the work of Sir John Kingman one of the world's leading researchers in probability and mathematical genetics this book touches on the important areas of these subjects in the last 50 years Leading authorities give a unique insight into a wide range of currently topical problems Papers in probability concentrate on combinatorial and structural aspects in particular exchangeability and regeneration The Kingman coalescent links probability with mathematical genetics and is fundamental to the study of the latter This has implications across the whole of genomic modelling including the Human Genome Project Other papers in mathematical population genetics range from statistical aspects including heterogeneous clustering to the assessment of molecular variability in cancer genomes Further papers in statistics are concerned with empirical deconvolution perfect simulation and wavelets This book will be warmly received by established experts as well as their students and others interested in the content

Malicious Deceivers Ioana B. Jucan, 2023-08-08 In *Malicious Deceivers* Ioana B Jucan traces a genealogy of post truth intimately tied to globalizing modernity and connects the production of repeatable fakeness with capitalism and Cartesian metaphysics Through case studies that cross times and geographies the book unpacks the notion of fakeness through the related logics of dissimulation deception and simulation performativity as seen with software AI television plastics and the internet Specifically Jucan shows how these dissimulation machines and performative objects construct impoverished pictures of the world ensuring a repeatable sameness through processes of hollowing out embodied histories and lived experience Through both its methodology and its subjects objects of study the book further seeks ways to counter the abstracting mode of thinking and the processes of voiding performed by the twinning of Cartesian metaphysics and global capitalism Enacting a model of creative scholarship rooted in the tradition of writing as performance Jucan a multimedia

performance maker and theater director uses the embodied I as a framing and situating device for the book and its sites of investigation In this way she aims to counter the Cartesian voiding of the thinking I and to enact a different kind of relationship between self and world from the one posited by Descartes and replayed in much Western philosophical and more broadly academic writing a relationship of separation that situates the I on a pedestal of abstraction that voids it of its embodied histories and fails to account for its positionality within a socio historical context and the operations of power that define it

Modeling Random Processes for Engineers and Managers James J. Solberg, 2008-12-22 Modeling Random Processes for Engineers and Managers provides students with a gentle introduction to stochastic processes emphasizing full explanations and many examples rather than formal mathematical theorems and proofs The text offers an accessible entry into a very useful and versatile set of tools for dealing with uncertainty and variation Many practical examples of models as well as complete explanations of the thought process required to create them motivate the presentation of the computational methods In addition the text contains a previously unpublished computational approach to solving many of the equations that occur in Markov processes Modeling Random Processes is intended to serve as an introduction but more advanced students can use the case studies and problems to expand their understanding of practical uses of the theory
