

Why is Ballastwater Treatment so difficult in the Baltic Sea?

FSA is deeply concerned over the lack of treatment equipment working with 100 % reliability.

- 1) Low salinity also means lower electrical conductivity
- 2) High turbidity means lower functionality of UV-technics
- 3) Ice slush is clogging very sensitive filters in wintertime
- 4) Holding time, chlorination requirement 24-48h rounds.

We are a bit into the transition period so, it would be high time for equipment providers to deliver sustainable solutions.

Ballastwater Manual:

The International Law on Ballast Water Maria Helena Fonseca de Souza Rolim, 2008-06-19 The introduction of invasive marine species into new environments whether by ships ballast water attached to ships hulls or via other means has been identified as one of the four main threats to the world's oceans along with land based sources of marine pollution over exploitation of living marine resources and the physical alteration or destruction of marine habitat Increased trade and the consequent greater volumes of maritime traffic over the last few decades have served to fuel the problem The effects in many areas of the world have been serious and significant Quantitative data show that the rate of bio invasions is continuing to increase in some cases exponentially and new areas are being found to be invaded all the time As volumes of seaborne trade continue overall to increase the problem may not yet have reached its peak In response IMO first adopted Guidelines for Preventing the Introduction of Unwanted Organisms and Pathogens from Ships Ballast Water and Sediment Discharges in 1991 while the United Nations Conference on Environment and Development UNCED held in Rio de Janeiro in 1992 recognized the issue as a major international concern The IMO Guidelines have since been kept constantly under review and updated Subsequently in February 2004 the International Convention for the Control and Management of Ships Ballast Water and Sediments was adopted In providing a broad overview of the legal aspects related to marine pollution caused by ballast water and tank sediments this book offers a pragmatic analysis of the current international legal system and includes principles of international customary law and also references to a comprehensive environmental treaty law framework which relates the Ballast Water Convention to other treaties such as the United Nations Convention on the Law of the Sea UNCLOS MARPOL and the Convention on Biological Diversity With such a wide ranging approach this book will certainly provide a source of valuable information for all those with a requirement to pursue the subject in depth From the Foreword by Efthimios E Mitropoulos Ballast Water Treatment and Exchange for Ships Alexander Olsen, Pamela Rossi Ciampolini, 2024-05-14 The inadvertent transfer of harmful aquatic organisms and pathogens in the ballast water of ships has been determined to have caused a significant adverse impact to many of the world's coastal regions The international maritime community under the auspices of the IMO has developed several documents including the International Conventions for the Control and Management of Ship's Ballast Water and Sediments 2004 Ballast Water Management Convention which are aimed at preventing the introduction of unwanted aquatic organisms and pathogens through the discharge of ballast water and sediments The Ballast Water Management Convention applies to vessels registered in a country which is party to the Convention and to those vessels registered in other countries when operating in the waters of a country which is party to the Convention As a means to prevent minimize and ultimately eliminate the risk to the environment human health property and resources arising from the transfer of harmful aquatic organisms and pathogens through the control and management of vessel's ballast water and sediment as well as to avoid unwanted side effects from

that control the Convention requires vessels to conduct a ballast water exchange or be fitted with an approved ballast water management system It is noted that several studies have shown that the effectiveness of ballast water exchange varies and is dependent on the vessel type design exchange method sequential flow through and dilution methods ballasting system configuration exchange location weather conditions and vessel s trading pattern For these reasons and others it has been determined that ballast water exchange does not provide adequate protective measures to prevent damage from organisms and pathogens carried in a vessel s ballast even though exchange was considered to be acceptable as an interim solution This book includes updates for the clarification of Survey requirements and adds the definition of biological commissioning testing as well as requirements for Class approved Service Providers to conduct biological commissioning testing Moreover this book includes updates due to the adoption of the requirements from IACS UR M74 Rev 2 and UR F45 and is applicable for existing ships where an application for approval for the plans of BWMS is made on or after 1 July 2022 or for new ships contracted for construction on or after 1 July 2022 Ballast Water Management and Environmental Protection Fikile Portia
