101 of the World's Tallest Buildings Georges Binder, The Images Publishing Group, 2006 Council on Tall Buildings and Urban Habitat *Building Performance Analysis* Pieter de Wilde, 2018-07-23 Explores and brings together the existent body of knowledge on building performance analysis Shortlisted in the CIBSE 2020 Building Performance Awards Building performance is an important yet surprisingly complex concept This book presents a comprehensive and systematic overview of the subject It provides a working definition of building performance and an in depth discussion of the role building performance plays throughout the building life cycle The book also explores the perspectives of various stakeholders the functions of buildings performance requirements performance quantification both predicted and measured criteria for success and the challenges of using performance analysis in practice Building Performance Analysis starts by introducing the subject of building performance its key terms definitions history and challenges It then develops a theoretical foundation for the subject explores the complexity of performance assessment and the way that performance analysis impacts on actual buildings In doing so it attempts to answer the following questions What is building performance How can building performance be measured and analyzed How does the analysis of building performance guide the improvement of buildings And what can the building domain learn from the way performance is handled in other disciplines Assembles the current body of knowledge on building performance analysis in one unique resource Offers deep insights into the complexity of using building performance analysis throughout the entire building life cycle including design operation and management Contributes an emergent theory of building performance and its analysis Building Performance Analysis will appeal to the building science community both from industry and academia It specifically targets advanced students in architectural engineering building services design building performance simulation and similar fields who hold an interest in ensuring that buildings meet the needs of their stakeholders Washing the Brain □ Metaphor and Hidden Ideology Andrew Goatly, 2007-01-17 Contemporary metaphor theory has recently begun to address the relation between metaphor culture and ideology In this wide ranging book Andrew Goatly using lexical data from his database Metalude investigates how conceptual metaphor themes construct our thinking and social behaviour in fields as diverse as architecture engineering education genetics ecology economics politics industrial time management medicine immigration race and sex He argues that metaphor themes are created not only through the universal body but also through cultural experience so that an apparently universal metaphor such as event structure as realized in English grammar is in fact culturally relative compared with e g the construal of cause and effect in the Algonquin language Blackfoot Moreover event structure as a model is both scientifically reactionary and as the basis for technological mega projects has proved environmentally harmful Furthermore the ideologies of early capitalism created or exploited a selection of metaphor themes historically traceable through Hobbes Hume Smith Malthus and Darwin These metaphorical concepts support neo Darwinian and neo conservative ideologies apparent at the

beginning of the 21st century ideologies underpinning our social and environmental crises The conclusion therefore recommends skepticism of metaphor s reductionist tendencies

The U.S. City in Transition Barbara Hahn, 2022-07-21 The U S city is undergoing constant change In the East and Midwest most cities were founded as trading posts on waterways They boomed during the industrial era and reached their population peak in the mid 20th century before suburbanization and deindustrialization caused them to decline in importance Traces of decay were everywhere and the prognosis for the future was conceivably poor As Barbara Hahn shows in her book this trend now seems to have been broken Things are looking up again for the US city Some of the former industrial cities have succeeded in structural change In the south and west of the country cities have developed into new growth centers However not all cities are benefiting from this positive development and many continue to shrink at an alarming rate As the author points out similar processes such as neoliberalisation deregulation privatisation and gentrification can be observed in all cities regardless of their location and level of development Due to the large number of

Guide To Natural Ventilation in High Rise Office Buildings Antony Wood, 2012-11-12 Tall buildings are not the only solution for achieving sustainability through increased density in cities but given the scale of current population shifts the vertical city is increasingly being seen as the most viable solution for many urban centers However the full implications of concentrating more people on smaller plots of land by building vertically whether for work residential or leisure functions needs to be better researched and understood It is generally accepted that we need to reduce the energy equation in both operating and embodied terms of every component and system in the building as an essential element in making it more sustainable Mechanical HVAC systems Heating

Ventilation and Air Conditioning in tall office buildings typically account for 30 40 percent of overall building energy consumption The increased efficiency or possibly even elimination of these mechanical systems through the provision of natural ventilation could thus be argued to be the most important single step we could make in making tall buildings more sustainable This guide sets out recommendations for every phase of the planning construction and operation of natural ventilation systems in these buildings including local climatic factors that need to be taken into account how to plan for seasonal variations in weather and the risks in adopting different implementation strategies All of the recommendations are based on analysis of the research findings from richly illustrated international case studies Tried and tested solutions to real life problems make this an essential guide for anyone working on the design and operation of tall buildings anywhere in the world This is the first technical guide from the Council on Tall Buildings and Urban Habitat s Tall Buildings Sustainability Working Group looking in depth at a key element in the creation of tall buildings with a much reduced environmental impact while taking the industry closer to an appreciation of what constitutes a sustainable tall building and what factors affect the sustainability threshold for tall
