Cell Cultures Ronald T. Acton, 2013-03-09 The Second International Cell Culture Congress was structured as was the First Congress to bring together scientists from academia and industry to discuss the use of cell culture in support of bioscience. It was felt that a forum whereby state of the art presentations were followed by informal workshops would provide opportunity for the greatest exchange of information. Within the atmosphere of the workshop problems common to basic as well as applied research were discussed and directions for the future were brought to light. These proceedings reflect and epitomize those discussions. Although it is difficult to cover all scientific disciplines utilizing cells in culture, we feel key areas were addressed at the Congress and are herein presented. Considerable emphasis has been given to the methods for establishing cells in culture and characterizing the cells once established, as well as the improved technology for growing established cell lines. Examples of how recombinant DNA technology is being used to manipulate genes within mammalian cells to clone mammalian genes and to insert them in prokaryotes has been included. Major emphasis has been given to the use of lymphocytes in culture for understanding immune responsiveness and the culturing of a variety of cell types as a means to understand disease states.

Vacuum Bazookas, Electric Rainbow Jelly, and 27 Other Saturday Science Projects Neil A. Downie, 2018-06-05 How do you crack nuts with a piece of string? Reverse gravity. Cobble together a clock out of a coffee cup, a soda bottle, and some water. Use a vacuum cleaner and nineteenth-century railroad technology to fashion a makeshift bazooka that can launch paper projectiles. Create a rainbow in a block of Jello. This is a one-volume romp through a whole array of counterintuitive science experiments that require little more than common household items and a sense of curiosity. Prepare to have your surprise sensors on overload as Neil Downie stretches math, physics, and chemistry to do what they have never done before. This book describes twenty-nine unusual but practical experiments, detailing how they are done and the math and physics behind them. It will delight both casual and inveterate tinkerers. Of varying levels of complexity, the experiments are grouped in sections covering a wide field of physics and the borders of chemistry, ranging from dynamic mechanics, Kinetic Curiosities, to electricity, Antediluvian Electronics, and combustion, Infernal Inventions. The chapters are titillatingly titled from Twisted
