Ecocriticism Greg Garrard, 2014 The Oxford Handbook of Ecocriticism provides a broad survey of the longstanding relationship between literature and the environment The moment for such an offering is opportune in many respects multiple environmental crises are increasingly inescapable at both transnational and local levels the role of the humanities in addition to technology and politics is increasingly recognized as central for exploring and finding solutions and the subject of ecocriticism has reached a kind of critical mass both within its Anglo American heartlands and beyond From its origins in the study of American Nature Writing and British Romanticism ecocriticism has developed along numerous theoretical historical cultural and geographical axes the most contemporary and exciting of which will be represented in the Handbook The contributors include eminent founders of the field including Cheryll Glotfelty and Jonathan Bate a number of key second wave ecocritics and the best up and coming scholars Topics covered include Green Shakespeare the Bard's subversive uses of the pastoral John Clare's sacred relationship with the land Thoreau's profound political passion the natural landscape as symbol of postcolonial resistance in works by Lessing Naipaul and Coetzee the relation between feminism and environmentalism language and the concept of biosemiotics and concerns over pollution and toxicity in films like Erin Brockovitch Michael Clayton and Al Gore's An Inconvenient Truth *Journey into the Deep* Rebecca L. Johnson, 2024-05-07

Have you ever wondered what mysteries the ocean holds Prepare to explore the ocean from sunlit shallows to the deepest darkest depths Along the way you'll meet many incredible creatures that are brand new to science Dive to a coral reef and spot a new species of pygmy octopus Travel deeper and discover fragile nearly transparent jellies as they drift past Then head down into a world of eternal night You'll encounter animals that make their own light and zombie worms that feast on the bones of dead whales Your adventure is based on the real journeys of scientists involved in the Census of Marine Life From 2000 to 2010 more than two thousand researchers from eighty two countries carried out the most extensive investigation of ocean life ever attempted Author Rebecca L Johnson takes readers to research sites around the globe showing how ocean scientists do their work Stunning photographs throughout bring readers face to face with some of the most mesmerizing creatures on Earth **The Abyss Stares Back** Stacy Alaimo, 2025-05-13 In an era of accelerating extinctions what does it mean to discover thousands of new species in the deep sea As we see the catastrophic effects of the

Anthropocene proliferate advanced technologies also grant us greater access to the furthest reaches of the world's oceans facilitating the discovery of countless new species. Sorting through the implications of this strange paradox, Stacy Alaimo explores the influence this newfound intimacy with the deep sea might have on our broader relationship to the nonhuman world. While many images of these abyssal creatures circulate as shallow clickbait aesthetic representations can be enticing lures for speculating about their lives, profoundly expanding our environmental concern. *The Abyss Stares Back* analyzes a diverse range of scientific literary and artistic accounts of deep sea exploration including work from the naturalist William Beebe and the artist Else Bostelmann as well as results of the Census of Marine Life that began at the turn of the twenty-first century. As she focuses on oft-overlooked creatures of the deep such as tubeworms, hatchetfish, siphonophores, and cephalopods which are typically cast as alien, Alaimo shows how depictions of the deep seas have been enmeshed in long colonial histories and racist constructions of a threatening abyss. Drawing on feminist environmentalism, posthumanism, science and technology studies, and Indigenous and non-Western perspectives, Alaimo details how our understanding of science is fundamentally altered by aesthetic encounters with these otherworldly life forms. She argues that although the deep sea is often thought of as a lifeless void with little connection to human existence, our increasing devastation of this realm underscores our ethical obligation to protect the biodiverse life in the depths. When the abyss stares back, it demands recognition. Retail e-book files for this title are screen reader friendly with images accompanied by short alt text and/or extended descriptions.

The Book of Barely Imagined Beings Caspar Henderson,2013-04-10 From medieval bestiaries to Borges s Book of Imaginary Beings we ve long been enchanted by extraordinary animals be they terrifying three headed dogs or asps impervious to a snake charmer s song But bestiaries are more than just zany zoology they are artful attempts to convey broader beliefs about human beings and the natural order Today we no longer fear sea monsters or banshees But from the infamous honey badger to the giant squid animals continue to captivate us with the things they can do and the things they cannot what we know about them and what we don t With The Book of Barely Imagined Beings Caspar Henderson offers readers a fascinating beautifully produced modern day menagerie But whereas medieval bestiaries were often based on folklore and myth the creatures that abound in Henderson s book from the axolotl to the zebrafish are with one exception very much with us albeit sometimes in depleted numbers The Book of Barely Imagined Beings transports readers to a world of real creatures that seem as if they should be made up that are somehow more astonishing than anything we might have imagined The yeti crab for example uses its furry claws to farm the bacteria on which it feeds The waterbear meanwhile is among nature s extreme survivors able to withstand a week unprotected in outer space These and other strange and surprising species invite readers to reflect on what we value or fail to value and what we might change A powerful combination of wit cutting edge natural history and philosophical meditation The Book of Barely Imagined Beings is an infectious and inspiring celebration of the sheer ingenuity and variety of life in a time of crisis and change

Oceans James Fargo Balliett, 2014-12-18 Covering 71 percent of the planet these saline bodies of water provided the unique conditions necessary for the building blocks of life to form billions of years ago This book explains how our oceans continue to support and influence life in important ways by providing the largest global source of protein in the form of fish populations by creating and influencing weather systems and by absorbing waste streams such as airborne carbon It is shown how oceans have an

almost magnetic draw almost half of the world's population lives within a few hours of an ocean. Although oceans are vast in size exceeding 328 million cubic miles 1.37 billion cubic kilometers they have been influenced by and have influenced humans in numerous ways. The book includes three detailed case studies. The first focuses on the most remote locations along the Mid Atlantic Ridge where new ocean floor is being formed twenty thousand feet underwater. The second considers the Maldives a string of islands in the Indian Ocean where increasing sea levels may force residents to abandon some communities by 2020. The third describes the North Sea at the edge of the Arctic Ocean where fishing stocks have been dangerously depleted as a result of multiple nations' unrelenting removal of the smallest and largest species. **Tracing**

Expression in Merleau-Ponty Véronique Marion Fóti, 2013. In this book the author addresses the guiding yet neglected theme of expression in Merleau-Ponty's thought. She traces Merleau-Ponty's ideas about how individuals express creative or artistic impulses through his three essays on aesthetics, his engagement with animality and new biology in the second of his lecture courses on nature and in his late ontology articulated in 1964 in the fragmentary text of *Le visible et l'invisible*. The Visible and the Invisible. With the exception of a discussion of Merleau-Ponty's 1945 essay *Cézanne's Doubt* the author engages with Merleau-Ponty's late and final thought with close attention to both his scientific and philosophical interlocutors especially the continental rationalists. Expression shows itself in Merleau-Ponty's thought to be primordial and this innate and fundamental nature of expression has implications for his understanding of artistic creation, science and philosophy.

Marine Sciences Kyle Kirkland, 2010. Explores six prominent topics in marine science research and describes how marine scientists conduct research and attempt to formulate answers to important questions. **Briefe an Poseidon** Cees Nooteboom, 2012-09-17. Meisterhaft beherrscht Cees Nooteboom die Kunst hinter den kleinen Dingen die gro ßen Weltfragen aufblitzen zu lassen. So f ðhrt etwa eine zuf ðllige Strandbegegnung zur Frage ob ein kleiner Junge der Spiegel sein kann in dem das eigene Alter verfliegt. Die Pflanzen im mediterranen Garten des Autors wiederum k ðmmert das wenig sie f ðhren ihr eigenes Leben. Und die Agave die vermutlich mit mexikanischem Akzent spricht verfolgt ohnehin eine nur ihr bekannte Mission. Nootebooms Korrespondenz mit dem Meeresgott bezaubert. Verspielt und tiefernst lakonisch und poetisch l ðsst sie das Erz ðhlte in einem klaren warmen Licht erscheinen. Methuselah's Zoo Steven N. Austad, 2023-08-15. Stories of long lived animal species from thousand year old tubeworms to 400 year old sharks and what they might teach us about human health and longevity. Opossums in the wild don't make it to the age of three, our pet cats can live for a decade and a half, cicadas live for seventeen years spending most of them underground. Whales however can live for two centuries and tubeworms for several millennia. Meanwhile human life expectancy tops out around the mid eighties with some outliers living past 100 or even 110. Is there anything humans can learn from the exceptional longevity of some animals in the wild? In *Methuselah's Zoo* Steven Austad tells the stories of some extraordinary animals considering why, for example, animal species that fly live longer than earthbound species and why animals found in the ocean live longest of all. Austad the leading

authority on longevity in animals argues that the best way we will learn from these long lived animals is by studying them in the wild Accordingly he proceeds habitat by habitat examining animals that spend most of their lives in the air comparing insects birds and bats animals that live on and under the ground from mole rats to elephants and animals that live in the sea including quahogs carp and dolphins Humans have dramatically increased their lifespan with only a limited increase in healthspan we re more and more prone to diseases as we grow older By contrast these species have successfully avoided both environmental hazards and the depredations of aging Can we be more like them

Embracing the Melody of Phrase: An Mental Symphony within **The Deep The Extraordinary Creatures Of The Abyss By Claire Nouvian**
