Perspectives in Business Informatics Research Rébecca Deneckère, Marite Kirikova, Janis Grabis, 2025-09-09
This book constitutes the proceedings of the 24th International Conference on Perspectives in Business Informatics Research BIR 2025 which took place in Riga, Latvia, in September 2025. The central theme of BIR 2025 was Bridging Knowledge Process and Systems for Responsible Digital Transformation. The 18 full papers and 5 short papers included in the proceedings were carefully reviewed and selected from 61 submissions. They were organized in topical sections as follows: Intelligent Decision Making and Data Management; Human Factors and Well Being in Digital Systems; Enterprise Architecture Modeling and Governing Adaptive Organizations; Process Mining and Digital Twin Perspectives; LLM and Generative AI in Modeling and Engineering; Smart Life and Structuring Security for Responsible Digital Systems.

Robot Manipulators Marco Ceccarelli, 2008-09-01
In this book, we have grouped contributions in 28 chapters from several authors all around the world on the several aspects and challenges of research and applications of robots with the aim to show the recent advances and problems that still need to be considered for future improvements of robot success in worldwide frames. Each chapter addresses a specific area of modeling, design, and application of robots but with an eye to give an integrated view of what makes a robot a unique modern system for many different uses and future potential applications. Main attention has been focused on design issues as thought challenging for improving capabilities and further possibilities of robots for new and old applications as seen from today's technologies and research programs. Thus, great attention has been addressed to control aspects that are strongly evolving also as function of the improvements in robot modeling, sensors, servo power systems, and informatics. But even other aspects are considered as of fundamental challenge both in design and use of robots with improved performance and capabilities like, for example, kinematic design, dynamics, vision integration.

Industrial Motion Control Dr. Hakan Gurocak, 2016-03-14
Motion control is widely used in all types of industries including packaging, assembly, textile, paper, printing, food processing, wood products, machinery, electronics, and semiconductor manufacturing. Industrial motion control applications use specialized equipment and require system design and integration. To design such systems, engineers need to be familiar with industrial motion control products, be able to bring together control theory, kinematics, dynamics, electronics, simulation, programming, and machine design, apply interdisciplinary knowledge, and deal with practical application issues. The book is

Robotic Welding, Intelligence and Automation Tzyh-Jong Tarn,Shan-Ben Chen,Changjiu Zhou,2007-08-13
Robotic welding systems have been used in different types of manufacturing They can provide several benefits in welding applications The most prominent advantages of robotic welding are precision and productivity Another benefit is that labor costs can be reduced Robotic welding also reduces risk by moving the human welder operator away from hazardous fumes and molten metal close to the welding arc The robotic welding system usually involves measuring and identifying the component to be welded we ing it in position controlling the welding parameters and documenting the produced welds However traditional robotic welding systems rely heavily upon human interv tion It does not seem that the traditional robotic welding techniques by themselves can cope well with uncertainties in the welding surroundings and conditions e g variation of weld pool dynamics fluxion solid weld torch and etc On the other hand the advent of intelligent techniques provides us with a powerful tool for solving demanding re world problems with uncertain and unpredictable environments Therefore it is intere ing to gather current trends and to provide a high quality forum for engineers and researchers working in the filed of intelligent techniques for robotic welding systems This volume brings together a broad range of invited and contributed papers that describe recent progress in this field
