These researchers also examined how biological responses to stressors (e.g., cortisol and other stress-related hormones) varied among individuals exposed to different combinations of stressors. They found that individuals exposed to multiple stressors (e.g., noise and air pollution) showed higher levels of cortisol than those exposed to a single stressor. This suggests that the combined effects of multiple stressors can be more than additive, leading to a greater overall biological response to stress.

Following President Eisenhower's treatment of the Korean War, the President's actions in the Vietnam War were perceived as a continuation of the policy of containment, which was aimed at preventing the spread of Communism. The Vietnam War, however, was a more complex conflict, involving not only the United States but also other nations, and it was characterized by a more active role for the American people. The Vietnam War was a significant event in the history of the United States, and it was a major factor in the decline of the American Empire.
