observations is only possible by understanding how the decision making of societies at risk is embedded in culture and how intervention measures acknowledge or neglect cultural settings The social construction of risk is being given increasing priority in understand how people experience and prioritize hazards in their own lives and how vulnerability can be reduced and resilience increased at a local level Culture and Disasters adopts an interdisciplinary approach to explore this cultural dimension of disaster with contributions from leading international experts within the field Section I provides discussion of theoretical considerations and practical research to better understand the important of culture in hazards and disasters Culture can be interpreted widely with many different perspectives this enables us to critically consider the cultural boundedness of research itself as well as the complexities of incorporating various interpretations into DRR If culture is omitted related issues of adaptation coping intervention knowledge and power relations cannot be fully grasped Section II explores what aspects of culture shape resilience How have people operationalized culture in every day life to establish DRR practice What constitutes a resilient culture and what role does culture play in a society s decision making It is natural for people to seek refuge in tried and trust methods of disaster mitigation however culture and belief systems are constantly evolving How these coping strategies can be introduced into DRR therefore poses a challenging question Finally Section III examines the effectiveness of key scientific frameworks for understanding the role of culture in disaster risk reduction and management DRR includes a range of norms and breaking these through an understanding of cultural will challenge established theoretical and empirical frameworks
