Bhatia, 1999 The immobilized biocatalyst IMB is a key component of biotransformation systems that are used to transform substrates to desired products The improvement of biocatalyst properties has a direct influence on the overall effectiveness of the process based on the biotransformation The basic catalytic characteristics of biocatalyst that are followed include kinetic properties pH optima stability and inhibition The investigation of catalytic properties of immobilized enzymes is still a time consuming procedure and is not always simple In the 1980s a major effort

was made to standardize the rules by which IMB is characterized The Working Party of EFB on immobilized biocatalysts has formulated principles of individual methods among them the requirement of kinetic characterization 1 It was recommended to use a packed bed reactor equipped with temperature control and with infinite flow circulation The system should be equipped with a post column unit to measure the time dependence of the product or substrate concentration 2 3 the most commonly used analytical methods being spectrophotometry chemiluminescence automatic titration bioluminescence chromatography polarimetry and biosensors based on the oxygen electrode There are two main drawbacks to the application of these methods 1 The need to vary the analytical principles depending on the chemical and physical chemical properties of analytes 2 In some cases mainly in the study of hydrolytic enzymes the natural substrate must be replaced by an artificial one that is chromolytic chromogenic chemiluminescent bioluminescent or fluorescent
