The Janus-Face of Language: Where Are the Emotions in Words and the Words in Emotions? Cornelia Herbert,Thomas Ethofer,Andreas J. Fallgatter,Peter Walla,Georg Northoff,2018-09-28 Language has long been considered independent from emotions In the last few years however research has accumulated empirical evidence against this theoretical belief of a purely cognitive based foundation of language In particular through research on emotional word processing it has been shown that processing of emotional words activates emotional brain structures elicits emotional facial expressions and modulates action tendencies of approach and avoidance probably in a similar manner as processing of non verbal emotional stimuli does In addition it has been shown that emotional content is already processed in the visual cortex in a facilitated manner which suggests that processing of emotional language content is able to circumvent in depth semantic analysis Yet this is only one side of the coin Very recent research putting words into context suggests that language may also construe emotions and that by studying word processing one can provide a window to one s own feelings All in all the empirical observations support the thesis of a close relationship between language and emotions at the level of word meaning as a specific evolutionary achievement of the human species As such this relationship seems to be different from the one between emotions and speech where emotional meaning is conveyed by nonverbal features of the voice But what does this relationship between written words and emotions theoretically imply for the processing of emotional information The present Research Topic and its related articles aim to provide answers to this question This book comprises several experimental studies investigating the brain structures and the time course of emotional word processing Included are studies examining the affective core dimensions underlying affective word processing and studies that show how these basic affective dimensions influence word processing in general as well as the interaction between words feelings and expressive behavior In addition new impetus comes from studies that on the one hand investigate how task sublexical and intrapersonal factors influence emotional word processing and on the other hand extend emotional word processing to the domains of social context and self related processing Finally future perspectives are outlined including research on emotion and language acquisition culture and multilingualism In summary this textbook offers scientists from different disciplines insight into the neurophysiological behavioral and subjective mechanisms underlying emotion and language interactions It gives new impulses to existing theories on the embodiment of language and emotion and provides new ways of looking at emotion cognition interactions *Miller's Anesthesia, 2-Volume Set E-Book* Michael A. Insights into Microbe-Microbe Interactions in Human Microbial Ecosystems: Strategies to be Competitive Clara G. de los Reyes-Gavilán, Nuria Salazar, 2016-12-01 All parts of our body having communication with the external environment such as the skin vagina the respiratory tract or the gastrointestinal tract are colonized by a specific microbial community The colon is by far the most densely populated organ in the human body The pool of microbes inhabiting our body is known as microbiota and their collective genomes as microbiome These microbial ecosystems regulate important functions of the host and their functionality and the balance among the diverse microbial populations is essential for the maintenance of a healthy status The impressive development in recent years of next generation sequencing NGS methods have made possible to determine the gut microbiome composition This together with the application of other high throughput omic techniques and the use of gnotobiotic animals has greatly improved our knowledge of the microbiota acting as a whole In spite of this most members of the human microbiota are largely unknown and remain still uncultured The final functionality of the microbiota is depending

not only on nutrient availability and environmental conditions but also on the interrelationships that the microorganisms inhabiting the same ecological niche are able to establish with their partners or with their potential competitors Therefore in such a competitive environment microorganisms have had to develop strategies allowing them to cope adapt or cooperate with their neighbors which may imply notable changes at metabolic physiological and genetic level The main aim of this Research Topic was to contribute to better understanding complex interactions among microorganisms residing in human microbial habitats

Mechanical Support for Heart Failure Jamshid H. Karimov, Kiyotaka Fukamachi, Randall C. Starling, 2020-09-04 This book provides a comprehensive overview of mechanical circulatory support of the failing heart in adults and children The book uniquely combines engineering knowledge and the clinician's perspective into a single resource while also providing insights into current and future development of mechanical circulatory support technology such as ventricular assist devices the total artificial heart and catheter based technologies for heart failure Topics featured in this book include The history of mechanical circulatory device development Fundamentals of hemodynamics support Clinical management of mechanical circulatory devices Surgical implantation techniques Current limitations of device therapies in advanced heart failure Advanced and novel devices in the development pipeline Opportunities for advancement in the field Mechanical Support for Heart Failure Current Solutions and New Technologies is a must have resource for not only physicians residents fellows and medical students in cardiology and cardiac surgery but also clinical and basic researchers in biomedical engineering with an interest in mechanical circulatory support heart failure and new technological applications in medicine

Plant Responses to Biotic and Abiotic Stresses: Lessons from Cell Signaling Sylvain Jeandroz, Olivier Lamotte, 2017-12-28 Facing stressful conditions imposed by their environment and affecting their growth and their development throughout their life cycle plants must be able to perceive to process and to translate different stimuli into adaptive responses Understanding the organism coordinated responses involves a fine description of the mechanisms occurring at the cellular and molecular level A major challenge is also to understand how the large diversity of molecules identified as signals sensors or effectors could drive a cell to the appropriate plant response and to finally cope with various environmental cues In this Research Topic we aim to provide an overview of various signaling mechanisms or to present new molecular signals involved in stress response and to demonstrate how basic fundamental research on cell signaling will help

to understand stress responses at the whole plant level *Social Belongingness and Well-Being: International Perspectives*
