Problem Solving ALAN H. SCHOENFELD, 2014-06-28 This book is addressed to people with research interests in the nature of mathematical thinking at any level to people with an interest in higher order thinking skills in any domain and to all mathematics teachers The focal point of the book is a framework for the analysis of complex problem solving behavior That framework is presented in Part One which consists of Chapters 1 through 5 It describes four qualitatively different aspects of complex intellectual activity cognitive resources the body of facts and procedures at one's disposal heuristics rules of thumb for making progress in difficult situations control having to do with the efficiency with which individuals utilize the knowledge at their disposal and belief systems one's perspectives regarding the nature of a discipline and how one goes about working in it Part Two of the book consisting of Chapters 6 through 10 presents a series of empirical studies that flesh out the analytical framework These studies document the ways that competent problem solvers make the most of the knowledge at their disposal They include observations of students indicating some typical roadblocks to success Data taken from students before and after a series of intensive problem solving courses document the kinds of learning that can result from carefully designed instruction Finally observations made in typical high school classrooms serve to indicate some of the sources of students' often counterproductive mathematical behavior *Business Mathematics by Dr. B. Transfer of Learning from a Modern Multidisciplinary Perspective Jose P. Mestre,2006-07-01 The chapters contained in the book present a new and exciting set of conceptual tools that will not only allow us to think about transfer in more productive ways but will also enable the development of educational and measurement tools that will greatly facilitate our ability to educate the children in our schools This volume is eclectic in bringing together researchers from psychology and science education especially physics who would not normally present their ideas under the same forum to share their views and perspectives on transfer What we believe has emerged is a fresh look at transfer issues from a multidisciplinary perspective
