## Structure Characteristics

1. The structure of the unit is a single-layer cylindrical body. Its design, manufacture and inspection are strictly operated by the Standards of Utilization Safety of Pressure Vessel.
2. The main body is made of good quality stainless steel and has anti-corrosion features, easy maintenance, and long service life.
3. The outline of the unit is quadrate. The displays and the control switches are centered on the controller board in the front of the unit. It is convenient.
4. A steam pressure stabilizer is used, the range is 0.04 – 0.22MPa (equal to steam temperature range: 109 – 134°C), to sterilize different objects.
5. The unit has a timer, when the temperature is up to the point of pre-selection, the timer indicator lights. The timer will time automatically. After sterilization, it will automatically disconnect the power and then alarm.
6. The electrical-heated elements of the unit are immersion tubes (3kw/220v) with a high heating effect. It should be grounded reliably.
7. A spring safety valve (rated pressure: 0.23MPa) is used. During normal sterilization, it is at the "off" position. As soon as the pressure in the pail surpasses the working pressure, the valve will automatically jump up and release steam, until the pressure returns to normal, then it closes automatically. To ensure the operation's safety.
8. An overload and leakage protector (OLP) is used; it will automatically disconnect the power when over-voltage or leakage occurs.
