The Tinkerer's Accomplice J. Scott Turner, 2009-06-30 A physiologist presents a provocative and scientifically rigorous

new perspective on Darwinism design and why the living world works so well When they contemplate nature they see evidence of design at work So it is jarring when biologists insist that this perception is all wrong What most people see as design they say purposeful directed even intelligent is only an illusion But in these days of increasingly assertive challenges to Darwinism the question becomes acute is our perception of design simply a mental figment or is there something deeper at work Physiologist Scott Turner argues that the apparent design of the living world can be accounted for scientifically But to do it we must consider a dimension that modern molecular biology often ignores the dynamic interaction between living organisms and their environment By combining environmental physiology and natural selection we begin to understand the beautiful fit between the form life takes and how life works In *The Tinkerer's Accomplice* Scott Turner takes up the question of design as a very real problem in biology his solution poses challenges to all sides in this critical debate
