Atomic And Molecular Beam Methods Volume 1:

Atomic and Molecular Beams Cyril Bernard Lucas, 2013-12-13 Atomic and molecular beams are employed in physics and chemistry experiments and to a lesser extent in the biological sciences These beams enable atoms to be studied under collision free conditions and allow the study of their interaction with other atoms charged particles radiation and surfaces Atomic and Molecular Beams Production and Collimation explores the latest techniques for producing a beam from any substance as well as from the dissociation of hydrogen oxygen nitrogen and the halogens The book not only provides the basic expressions essential to beam design but also offers in depth coverage of Design of ovens and furnaces for atomic beam production Creation of atomic beams that require higher evaporation temperatures Theory of beam formation including the Clausing equation and the transmission probability Construction of collimating arrays in metals plastics glass and other materials Optimization of the design of atomic beam collimators While many review articles and books discuss the application of atomic beams few give technical details of their production Focusing on practical application in the laboratory the author critically reviews over 800 references to compare the atomic and molecular beam formation theories with actual experiments Atomic and Molecular Beams Production and Collimation is a comprehensive source of material for experimentalists facing the design of any atomic or molecular beam and theoreticians wishing to extend the theory *Atom, Molecule, and Cluster Beams I* Hans Pauly, 2012-12-06 A consistent up to date description of the extremely manifold and varied experimental techniques which nowadays enable work with neutral particles Th book lays the physical foundations of the various experimental techniques which utilize methods from most fields in physics *Nuclear Science Abstracts*, 1974-07 *The Chemical Dynamics and Kinetics of Small Radicals* Ketian Liu, Albert Wagner, 1996-01-19 This book highlights recent progress in the chemistry of radicals Developments include the growing use of lasers to generate radicals the application of lasers to provide state angular polarization energy and real time resolution in kinetics and dynamics experiments the development of theories for handling the reactions of radicals and the simulation of the reaction dynamics of increasingly larger systems for direct comparison to experimental results The book emphasizes the increasing interaction between experimental dynamics kinetics and theory It is appropriate for chemistry graduate students and researchers about to enter the field However the discussions of some topics progress to a more advanced level so that even an expert will find the book useful **Surface Science** Kurt W. Atomic and Molecular Clusters Roy L. Johnston, 2002-04-25 Cluster physics is the foundation of the increasingly important field of nanotechnology Clusters ranging in size from a few to many millions of atoms constitute a fascinating field of research in physics chemistry and materials science They are formed by most of the elements of the Periodic Table and the types of bonding and the resultant clusters are equally as varied This book introduces atomic clusters ranging from weakly bonded clusters of argon to strongly bonded carbon clusters and metal nano particles It includes worked examples to enable lecturers and students to gauge their understanding and progress Atomic and Molecular Clusters describes the experimental generation detection and interrogation of clusters and theoretical approaches developed to aid understanding of their physical properties It classifies clusters according to their bonding types and gives examples of present and possible future applications of clusters in electronic optical and magnetic devices

High-Resolution Experiments on Strong-Field Ionization of Atoms and Molecules Lutz Fechner, 2016-04-26 In this thesis the ionization of atoms and small molecules in strong laser fields is experimentally studied using a reaction microscope The population of autoionizing doubly excited states in the laser fields is proven and a possible connection to the well known dielectronic recombination processes is discussed The fundamental process of tunnel ionization in strong laser fields is subject of investigation in a pump probe experiment with ultrashort laser pulses A coherent superposition of electronic states in singly charged argon ions is created within the first and subsequently tunnel ionized with the second pulse This gives access to state selective information about the tunneling process and allows to test common models Moreover the ionization of krypton and argon at different wavelengths is studied from the multiphoton to the tunneling regime The wavelength dependent investigations are furthermore extended to molecular hydrogen In addition to ionization this system might undergo different dissociative processes Channel selective electron momentum distributions are presented and compared to each other
