standpoint including where necessary relevant physiological material There exist many excellent texts which cover the basic science and technology of nuclear medicine We have therefore severely limited our coverage of these aspects of the subject to matters which we felt to be essential particularly those which have been less well covered in other texts for example the contents of Chapter 21 on Quantitation by Royal and McNeil Similarly we have included at the end of some chapters descriptions of particular techniques where we and the authors felt that it would be helpful In order to emphasize the clinical approach of this book we have inverted the traditional sequence of material in chapters presenting the clinical problems first in each instance
