## **Atlas Of Nevada Conifers A Phylogeographic Reference:**

*Atlas of Nevada Conifers* David Alan Charlet, 1996 *Atlas of Nevada Conifers* is a major scientific contribution to our understanding of the ecology of Nevada. It documents in great detail the distribution of all native conifer species in the state, critical information because of the primary ecological importance of conifers for all organisms and because of the lack of documentation of these distributions in the scientific literature before now. Charlet maps and documents the exact location of herbarium records for 1 600 individual trees. The data found in 23 tables and 22 range maps will serve as a primary reference for botanists, land managers and conservation biologists for years to come. Conifers Aljos Farjon, 1999 Conifers are one of the world's most important resources of timber. If managed wisely and used sustainably, these resources will provide wood for a multitude of purposes virtually indefinitely. Additional products include resins and their derivatives and even medicinal extracts, for example taxol, now used in the treatment of cancer. Conifers occur on all continents except Antarctica. Of the 630 species, 355 are listed as of conservation concern, with 200 or 25 of species threatened with extinction. Although exploitation of these resources is as old as civilization, this century has seen a dramatic increase in the exploitation of timber resources. This action plan assesses conifer diversity and its threats. It is unique among IUCN's Plant Action Plans so far published in that it gives the complete global red list of conifers using the 1994 IUCN Red List Categories and criteria. Data is analyzed to identify conifer hot spots where conservation should be a priority and a short list of threatened species is prioritized.

**Methods and Approaches in Forest History** Mauro Agnoletti, Steven Anderson, 2000 A companion to *Forest History International Studies on Socioeconomic and Forest Ecosystem Change* which includes over 20 papers from the same conference held in Florence in 1998. This volume focuses on the different approaches and methods adopted in the study of forest history. The interdisciplinary nature of these studies is emphasized, bringing in the different perspectives of anthropologists, botanists, ecologists, foresters, historians, geneticists and geographers. This volume demonstrates the rich diversity of approaches and methods to forest history. **Landscape Restoration Handbook, Second Edition** Donald Harker, 1999-02-16 Five years after the first edition of *Landscape Restoration Handbook* was published, its natural landscaping and ecological restoration techniques have become standard and successful practice throughout the nation. Now the *Landscape Restoration Handbook Second Edition* substantially widens the scope of the original work. Approximately 250 pages larger than the first edition, new and expanded chapters offer guidance on Development of natural landscaping and ecological restoration programs, Education, regional planning and increased biological diversity, Ecological communities, species listings, Scientific and common plant names associated with ecological communities, Nurseries that propagate and sell native plants throughout the United States. Naturalization has proven to be a win-win situation all around. Monetary costs that landowners are saving on maintenance and chemicals also translates to environmental benefits for the greater community. Landscape and golf course architects, urban planners, horticulturists, golf course superintendents and consultants have

already put the Landscape Restoration Handbook to the test Let the Second Edition bring you up to date on the numerous benefits of naturalization

**A Garden Of Bristlecones** Michael P. Cohen, 1998-09-01 An engaging well illustrated natural and cultural history of the oldest living organism the bristlecone pine Since Edmund Schulman discovered in 1958 that individual bristlecones live nearly 5 000 years the trees have been investigated primarily for the elaborate record their rings contain The trees have been read closely with major consequences for natural and human history Historians have read local and global environmental change Archaeologists have rewritten the history of civilization Writers have transformed them into figures pertinent to the human dilemmas of time and eternity *A Garden of Bristlecones* investigates professional and popular conceptions as a set of narratives drawn from the outside and inside of the trees It reveals the premises of the investigators the nature of their inquiry and the extent of their knowledge while also revealing the Great Basin bristlecone itself Illustrations by Valerie Cohen

**Proceedings RMRS.** , 1998 *The Great Basin* Donald Grayson, 2011-04-18 *The Great Basin* centering on Nevada and including substantial parts of California Oregon and Utah gets its name from the fact that none of its rivers or streams flow to the sea This book synthesizes the past 25 000 years of the natural history of this vast region It explores the extinct animals that lived in the Great Basin during the Ice Age and recounts the rise and fall of the massive Ice Age lakes that existed here It explains why trees once grew 13 beneath what is now the surface of Lake Tahoe explores the nearly two dozen Great Basin mountain ranges that once held substantial glaciers and tells the remarkable story of how pinyon pine came to cover some 17 000 000 acres of the Great Basin in the relatively recent past These discussions culminate with the impressive history of the prehistoric people of the Great Basin a history that shows

how human societies dealt with nearly 13 000 years of climate change on this often challenging landscape Provided by publisher     The Colorado Plateau II Charles Van Riper, David John Mattson, 2005 The publication of *The Colorado Plateau Cultural Biological and Physical Research* in 2004 marked a timely summation of current research in the Four Corners states This new volume derived from the seventh Biennial Conference on the Colorado Plateau in 2003 complements the previous book by focusing on the integration of science into resource management issues The 32 chapters range in content from measuring human impacts on cultural resources through grazing and the wildland urban interface issues to parameters of climate change on the Plateau The book also introduces economic perspectives by considering shifting patterns and regional disparities in the Colorado Plateau economy A series of chapters on mountain lions explores the human wildland interface These chapters deal with the entire spectrum of challenges associated with managing this large mammal species in Arizona and on the Colorado Plateau conveying a wealth of timely information of interest to wildlife managers and enthusiasts Another provocative set of chapters on biophysical resources explores the management of forest restoration from the micro scale all the way up to large scale GIS analyses of ponderosa pine ecosystems on the Colorado Plateau Given recent concerns for forest health in the wake of fires severe drought and bark beetle infestation these chapters will prove enlightening for forest service park service and land management professionals at both the federal and state level as well as general readers interested in how forest management practices will ultimately affect their recreation activities With broad coverage that touches on topics as diverse as movement patterns of rattlesnakes calculating watersheds and rescuing looted rockshelters this volume stands as a compendium of cutting edge research on the Colorado Plateau that offers a wealth of insights for many scholars     **Proceedings** ,1999     **Proceedings--shrublands under fire** ,2008     Status and Trends of the Nation's Biological Resources ,1998     **Status and Trends of the Nation's Biological Resources** Catherine E. Puckett Haecker, Paul A. Opler, Peter D. Doran, 1998     *A Bibliography of Conifers* Aljos Farjon, 2005 The new edition of this work first published in 1990 includes 3 787 references to the published literature To make it far more accessible many more general titles have been added including coverage of Araucariaceae Cupressaceae and Pinaceae and subjects related to their taxonomy     Mapping And Imagination In The Great Basin Richard V. Francaviglia, 2005-03-07 The Great Basin was the last region of continental North America to be explored and mapped and it remained largely a mystery to Euro Americans until well into the nineteenth century In *Mapping and Imagination in the Great Basin* geographer historian Richard Francaviglia shows how the Great Basin gradually emerged from its cartographic silence as terra incognita and how this fascinating process both paralleled the development of the sciences of surveying geology hydrology and cartography and reflected the changing geopolitical aspirations of the European colonial powers and the United States Francaviglia's interdisciplinary account of the mapping of the Great Basin combines a chronicle of the exploration of the region with a history of the art and science of cartography and of the political economic and cultural contexts in which maps are created It also offers a

compelling wide ranging discussion that combines a description of the daunting physical realities of the Great Basin with a cogent examination of the ways humans from early Native Americans to nineteenth century surveyors to twentieth century highway and air travelers have understood defined and organized this space psychologically and through the medium of maps Mapping and Imagination in the Great Basin continues Francaviglia's insightful richly nuanced meditation on the Great Basin landscape that began in *Believing in Place* Whitaker's Books in Print ,1998
