invaluable Los Angeles Review of Books **The Citizen's Guide to Climate Success** Mark Jaccard, 2020-02-06 Shows readers how we can all help solve the climate crisis by focusing on a few key achievable actions *The Fossil-Fuelled Climate Crisis* Raymond Murphy, 2020-09-29 This book analyses the threat posed by the continued use of fossil fuels By utilizing Elizabeth Shove's social practices approach and Murphy's own social closure framework the book examines the accelerating treadmill of carbon polluting practices It incorporates externalities theory to investigate how the full cost of fossil fuels is paid by others rather than users and to demonstrate that the environmental commons is a medium for conveying intergenerational monopolisation and exclusion in the Anthropocene Murphy uncovers a pattern of opposition to change when exploiting valuable but dangerous resources He argues that a new faith in mastering nature is emerging as a belief in just in time technological solutions to circumvent having to change fossil fuelled practices The book then moves on to assess proposed solutions including Beck's staging of risk and his hypothesis that the anticipation of global catastrophe will incite emancipation It proposes a novel approach to enhancing foresight and avoid incubating disaster It will appeal to readers interested in an original social science analysis of this creeping crisis and its resolution Handbook of Climate Change Communication: Vol. 1 Walter Leal Filho, Evangelos Manolas, Anabela Marisa Azul, Ulisses M. Azeiteiro, Henry McGhie, 2017-12-29 This comprehensive handbook provides a unique overview of the theory methodologies and best practices in climate change communication from around the world It fosters the exchange of information ideas and experience gained in the execution of successful projects and initiatives and discusses novel methodological approaches aimed at promoting a better understanding of climate change adaptation Addressing a gap in the literature on climate change communication and pursuing an integrated approach the handbook documents and disseminates the wealth of experience currently available in this field Volume 1 of the handbook provides a unique description of the theoretical basis and of some of the key facts and phenomena which help in achieving a better understanding of the basis of climate change communication providing an essential basis for successful initiatives in this complex field *After Geoengineering* Holly Jean Buck, 2019-10-01 Climate engineering is a dystopian project But as the human species hurtles ever faster towards its own extinction geoengineering as a temporary fix to buy time for carbon removal is a seductive idea We are right to fear that geoengineering will be used to maintain the status quo but is there another possible future after geoengineering Can these technologies and practices be used to bring carbon levels back down to pre industrial levels Are there possibilities for massive intentional intervention in the climate that are democratic decentralised or participatory These questions are provocative because they go against a binary that has become common sense geoengineering is assumed to be on the side of industrial agriculture inequality and ecomodernism in opposition to degrowth renewable energy sustainable agriculture and climate justice After Geoengineering rejects this binary to ask what if the people seized the means of climate production Both critical and utopian the book examines the possible futures after geoengineering Rejecting the idea that geoengineering is

some kind of easy work around Holly Buck outlines the kind of social transformation that would be necessary to enact a programme of geoengineering in the first place

Faith after the Anthropocene Matthew Wickman, Jacob Sherman, 2020-11-09 Recent decades have brought to light the staggering ubiquity of human activity upon Earth and the startling fragility of our planet and its life systems This is so momentous that many scientists and scholars now argue that we have left the relative climactic stability of the Holocene and have entered a new geological epoch known as the Anthropocene This emerging epoch may prompt us not only to reconsider our understanding of Earth systems but also to reimagine ourselves and what it means to be human How does the Earth s precarious state reveal our own How does this vulnerable condition prompt new ways of thinking and being The essays that are part of this collection consider how the transformative thinking demanded by our vulnerability inspires us to reconceive our place in the cosmos alongside each other and potentially before God Who are we after the concept of the Anthropocene What forms of thought and structures of feeling might attend us in this state How might we determine our values and to what do we orient our hopes

Faith a conceptual apparatus for engaging the unseen helps us weigh the implications of this massive but in some ways mysterious force on the lives we lead faith helps us visualize what it means to exist in this new and still emergent reality

Just Technology Thomas J. Siller, Gearold Johnson, 2022-05-31 To address the complexity of today's global challenges requires new ways of thinking The idea that technology is always the best maybe only approach worth taking needs to be reconsidered Sustainable approaches must also draw from non technological areas To that end this book introduces the idea of just technology by rephrasing the idea of just war in order to include concepts of sustainability in future engineering design The book begins by defining justice and relating these definitions to technology This is followed by illustrating several notions of sustainability and the awareness that needs to be focused on societal challenges due to the finite resources available in the natural world Four questions are enumerated to be addressed in order to qualify as a just use of technology 1 Is the harm being inflicted by the problem on the community the environment or humanity in general lasting serious and certain 2 Have all alternative solutions been investigated first including non technology based solutions Technology is the last choice not the first 3 Do we have confidence in the successful implementation of this technological solution and 4 Is the potential harm from the technological solution potentially worse than the issue being addressed Have all unintended consequences been considered that could arise from the technological solution The book ends with a description for implementing these questions into the traditional engineering design process Examples are included for reflection and help to understand how the design process proceeds

The Last Empires William Allan, 2017-10-17 This book is a forthright and novel examination of efforts to improve national and global governance over the last forty years Much has changed since Michel Foucault considered and rejected economics and neoliberalism as a potential mechanism for individuals to govern themselves and their nations Nonetheless his approach which focused on the evolution of social development through interaction of many disciplines and biopolitical forces remains highly relevant Neoliberalism became a dominant political force from the 1980s to the present It has failed however to address issues of inequality to ensure economic stability or to tackle the problems of people and nations that have been marginalized by industrial progress and international conflict Market forces alone cannot meet the needs of global society Now however developments in behavioural theory institutional theory and analysis accounting theory and accountability practice are providing tools that are developing comprehensive and evidence based measures of well being that promise to broaden and strengthen the field of socio economic policy making Resolute albeit long term steps to establish widely accepted standards of accountability the book argues are essential to guide policies and address the formidable governance issues of global security information technology social inequality and economic and financial crises that the world faces at the beginning of the 21st century

which includes climate change biodiversity loss pollution habitat destruction and all the associated impacts that fragment and threaten to create collapse among the systems that created and sustain us There are the related economic and social impacts the fragmentation of communities and political ideologies through attitude polarisation and the increasing threats to systems by those who seek to promote further exploitation at the expense of attempts to regain some system of cooperation and an attitude of compassion which is at the heart of our survival strategies as a species Philosophy has always sought to address questions related both to our place in the universe and to how to live given our understanding of our place Those of us committed to a philosophical life have used a range of metaphors and narratives to enlighten and to exhort to action those who would seek to understand what to do how and why Philosophy has played a key role in helping us as a species to respond to the ecological emergency What then is the practice of philosophy given that we re in an ecological emergency This question is the thread and it forms the framework for the dialogue that runs through the book
