		SCHEME OF WORK		FORM FOUR CHEMISTRY		TERM ONE		
WK NO	LJ NO	TOPIC / SUBTOPIC	LESSON / SPECIFIC OBJECTIVES	TEACHING / LEARNING ACTIVITIES	MATERIALS / RESOURCES	REFERENCES	REMARKS	
1		ACIDS, BASES AND SALTS.	<u>By the end of the lesson, the learner should be able to</u>					
	1.	Strength of acids.	Define an acid in terms of hydrogen ions.	Class experiments: investigate reactions of magnesium and zinc carbonate with different acids. Make and record observations in tabular form.	Magnesium strip, zinc carbonate, 2M HCl, 2M H ₂ SO ₄ , 2M ethanoic acid.	K.L.B. BK IV Pages 1-4		
	2	Acids in aqueous form.	Explain strength of acids in aqueous form in terms of number of hydrogen ions present.	Make deductions from the observations. Write relevant chemical equations and ionic equations. Detailed discussion leading to the definition of an acid and explanation of strength of an acid.				
	3.	pH values of acids.	Determine strength of acids using pH values.	Q/A: review determination of strength of acids using a litmus paper and pH scale. Class / group experiments: record colour of universal indicator in 2M HCl and 2M ethanoic acid.	Universal indicator, 2M HCl, 2M ethanoic acid, dry cells, carbon electrodes, milli-ammmeters, wires, switches etc.	K.L.B. BK IV Pages 4-6		
	4	Electrical conductivities of aqueous acids.	Determine strengths of acids by comparing their electrical conductivities. Classify acids as either strong or weak in terms of partial dissociations in aqueous solutions.	Set up voltmeters of 2M HCl and 2M ethanoic acid in turn. Record ammeter of current . Discuss the observations. Write corresponding ionic equations.				
	5	Definition of a base in terms of hydroxide ions.	Define a base in terms of hydroxide ions.	Teacher demonstration: Dissolve calcium hydroxide in water. Carry out litmus test on the resulting solution. Discuss the results; hence define a base in terms of hydroxide ions.	Red litmus paper, calcium hydroxide solid.	K.L.B. BK IV Pages 6-7

Miscellaneous Papers Richard Green Moulton, 1883 *Chemical News and Journal of Industrial Science*, 1861

The Chemical News and Journal of Physical Science, 1888 *Proteinase Inhibitors* H. Fritz, H. Tschesche, L.J. Greene, E. Truscheit, 2012-12-06 These proceedings contain the papers presented at the Bayer Symposium V which was held in Grosse Ledder on October 16-21 1973 and which was simultaneously the Second International Research Conference on Proteinase Inhibitors. The cordial atmosphere, the frank discussions, and the profitable exchange of ideas during the First International Research Conference on Proteinase Inhibitors which was held on November 4-6 1970 in Munich were a stimulant for us to consider holding a Second Conference especially as the steadily increasing research activities in this and related fields called for a new assessment of recent efforts in proteinase inhibitor research. In the three years since the First Conference was held, this field has developed particularly in the areas of molecular aspects of protein-protein interactions and in the extension to inhibitors of non-serine proteinases and peptidases. In planning this meeting, the Organizing Committee was faced with the problem of selecting a limited number of participants and we decided that it was appropriate and necessary to focus in detail on the chemistry of proteinase inhibitors, their interactions with a variety of enzymes, and also to invite more general papers to survey the physiological and clinical aspects of the subject which we felt would be of importance in the future.

Encyclopedia of Chemical Physics and Physical Chemistry John H. Moore, Nicholas D. Spencer, 2023-07-03 The Encyclopedia of Physical Chemistry and Chemical Physics introduces possibly unfamiliar areas, explains important experimental and computational techniques, and describes modern endeavors. The encyclopedia quickly provides the basics, defines the scope of each subdiscipline, and indicates where to go for a more complete and detailed explanation. Particular attention has been paid to symbols and abbreviations to make this a user-friendly encyclopedia. Care has been taken to ensure that the reading level is suitable for the trained chemist or physicist. The encyclopedia is divided into three major sections: FUNDAMENTALS, the mechanics of atoms and molecules and their interactions; the macroscopic and statistical description of systems at equilibrium; and the basic ways of treating reacting systems. The contributions in this

section assume a somewhat less sophisticated audience than the two subsequent sections At least a portion of each article inevitably covers material that might also be found in a modern undergraduate physical chemistry text METHODS the instrumentation and fundamental theory employed in the major spectroscopic techniques the experimental means for characterizing materials the instrumentation and basic theory employed in the study of chemical kinetics and the computational techniques used to predict the static and dynamic properties of materials APPLICATIONS specific topics of current interest and intensive research For the practicing physicist or chemist this encyclopedia is the place to start when confronted with a new problem or when the techniques of an unfamiliar area might be exploited For a graduate student in chemistry or physics the encyclopedia gives a synopsis of the basics and an overview of the range of activities in which physical principles are applied to chemical problems It will lead any of these groups to the salient points of a new field as rapidly as possible and gives pointers as to where to read about the topic in more detail
