Structural Integrity and Failure Resat Oyguc, Faham Tahmasebinia, 2021-02-10 Structural integrity and failure assessment have been considered by many fields of engineers as it is a multi disciplinary concept The assessment procedure vitally ensures that structural elements will remain functional

throughout their service lives Structural failure refers to the loss of structural integrity by means of loss at the component or system level elements The main concern of integrity assessment is that a structural failure may be avoided at the service level by designing the structure to withstand its designated loads Hence for satisfactory structural performance structural safety failure and interaction between them should be considered throughout the design and analysis stages This book is a collection of chapters that provide the researcher with a comprehensive perspective on structural integrity and its sub disciplines

Low-Carbon Oriented Market Mechanism and Reliability Improvement of Multi-energy Systems Minglei Bao, Sheng Wang, Liang Du, Zhengmao Li, Weiqi Hua, 2024-12-17 The energy crisis has brought great challenges to the low carbon and economic development of the energy system To achieve net zero emissions energy systems can have an increasing penetration of renewable energy and a deep coupling of multiple energy sectors i e electricity gas and heat To deal with the increasing fluctuations of renewable energy in multi energy systems the market mechanism is an effective solution for the optimal allocation of resources An optimal market design could stimulate different resources to actively assist the carbon reduction and reliability improvement of multi energy systems Therefore research on low carbon oriented market design and optimal operation is expected to improve the reliability and sustainability of multi energy systems The objective of this Research Topic is to explore the latest advances in market design and reliability improvement technologies of multi energy systems with a focus on low carbon reliability and resilience We have the following research goals 1 Effective market mechanisms and interaction frameworks to support the operation of energy systems 2 Advanced operation and control methods for flexible resources such as traditional units energy storage electric vehicles electric hydrogen production etc 3 Advanced planning strategies and portfolio management for flexible resources in multi energy systems 4 Advanced evaluation methods for flexibility resilience and carbon emissions of energy systems 5 Effective applications of integrated demand response in energy systems with new technical and economic models Original research and review articles in theoretical methodological or practical focuses such as models policies algorithms and applications are all welcome Research areas may include but are not limited to the following Low carbon oriented market mechanism Interaction framework designs for flexible resources Modeling and optimization technologies for multi energy systems Evaluation methods for the system resilience flexibility and carbon emissions Operation control and planning methods of multi energy systems Applications of artificial intelligence technology in reliability improvement Renewable energy prediction and integration

Epitranscriptomics: The Novel RNA Frontier Giovanni Nigita, Mario Acunzo, William Chi Shing Cho, Carlo Maria Croce, 2019-01-31 Following the formulation of the central dogma of molecular biology and the later discovery of classes of non coding RNAs the primary focus of Genetics was essentially on variation of DNA aiming at elucidating biological pathways perturbed in diseases Recently extensive attention has shifted towards the study of posttranscriptional RNA modifications occurring in both protein coding as well as non coding RNAs revealing a novel and finer layer of complexity in gene regulation This in turn has led to the birth of the novel field of Epitranscriptomics The recent increase of applications of high throughput sequencing technology HTS has allowed the unprecedented opportunity to identify on a transcriptome wide scale millions of RNA modifications in human genes counting today more than 140 distinct types such as methylation e.g. m6A m1A m5C hm5C 2 OMe methylation e.g. m6A m1A m5C hm5C 2 OMe pseudourylation deamination e.g. A to I RNA editing The scope of this Research Topic was to collect both reviews and research articles addressing the wet lab approaches and bioinformatics methodologies necessary to aid in the identification of novel RNA modifications and characterization of their biological functions Among the articles embracing the aim of the Research Topic we have collected four original research and methods articles five reviews and a technology article
