M-Health Innovations for Patient-Centered Care Moumtzoglou, Anastasius, 2016-01-26 The integration of mobile technology into the medical industry has revolutionized the efficiency and delivery of healthcare services Once limited by distance and physical barriers health professionals can now reach patients and other practitioners with ease M Health Innovations for Patient Centered Care is a pivotal reference source for the latest scholarly research on the incorporation of mobile telecommunication devices in the health field and how this technology has increased overall quality of care Highlighting various types of available technologies necessary support infrastructures and alterations in business models this publication is ideally designed for medical professionals upper level students and e health system designers interested in the effects of mobile technology on healthcare delivery *Selected Papers from the 2018 IEEE International Workshop on Metrology for the Sea* Attilio Di Nisio, Francesco Picariello, 2020-11-13 This Special Issue is devoted to recent developments in instrumentation and measurement techniques applied to the marine field The sea is the medium that has allowed people to travel from one continent to another using vessels even today despite the use of aircraft It has also been acting as a great reservoir and source of food for all living beings However for many generations it served as a landfill for depositing conventional and nuclear wastes especially in its deep seabeds and we are assisting in a race to exploit minerals and resources different from foods encompassed in it Its health is a great challenge for the survival of all humanity since it is one of the most important environmental components targeted by global warming As everyone may know measuring is a step that generates substantial knowledge about a phenomenon or an asset which is the basis for proposing correct solutions and making proper decisions However measurements in the sea environment pose unique difficulties and opportunities which is made clear from the research results presented in this Special Issue **Handbook of Human and Social Conditions in Assessment** Gavin T. L. Brown, Lois R. Harris, 2016-06-23 The Handbook of Human and Social Conditions in Assessment is the first book to explore assessment issues and opportunities occurring due to the real world of human cultural historical and societal influences upon assessment practices policies and statistical modeling With chapters written by experts in the field this book engages with numerous forms of assessment from classroom level formative assessment practices to national accountability and international comparative testing practices all of which are significantly influenced by social and cultural conditions A unique and timely contribution to the field of Educational Psychology the Handbook of Human and Social Conditions in Assessment is written for researchers educators and policy makers interested in how social and human complexity affect assessment at all levels of learning Organized into four sections this volume examines assessment in relation to teachers students classroom conditions and cultural factors Each section is comprised of a series of chapters followed by a discussant chapter that synthesizes key ideas and offers directions for future research Taken together the chapters in this volume demonstrate that teachers test creators and policy makers must account for the human and social

conditions that shape assessment if they are to implement successful assessment practices which accomplish their intended outcomes *Handbook of the International Political Economy of Energy and Natural Resources* Andreas Goldthau, Michael F. Keating, 2018-01-26 This Handbook offers a comprehensive overview of the latest research from leading scholars on the international political economy of energy and resources Highlighting the important conceptual and empirical themes the chapters study all levels of governance from global to local and explore the wide range of issues emerging in a changing political and economic environment **2016 Oncology Nursing Drug Handbook** Wilkes, 2015-12-21 Written especially for nurses caring for patients with cancer the 2016 Oncology Nursing Drug Handbook uniquely expresses drug therapy in terms of the nursing process nursing diagnoses etiologies of toxicities and key points for nursing assessment intervention and evaluation **Functional Characterization of Insect Chemoreceptors: Receptivity Range, Expression and Evolution** William B. Walker, Emmanuelle Jacquin-Joly, Sharon R. Hill, 2016-06-11 Olfaction and taste are of critical importance to insects and other animals since vital behaviours including mate food and host seeking as well as predator and toxin avoidance are guided by chemosensory cues Mate and habitat choice are to a large extent determined by chemical signals and chemoreceptors contribute accordingly to pre mating isolation barriers and speciation In addition to fundamental physiological ecological and evolutionary consideration the knowledge of insect taste and especially olfaction is also of great importance to human economies since it facilitates a more informed approach to the management of insect pests of agricultural crops and forests and insect vectors of disease Chemoreceptors which bind to external chemical signals and then transform and send the sensory information to the brain are at the core of the peripheral olfactory and gustatory system and have thus been the focus of recent research in chemical ecology Specifically emphasis has been placed on functional characterization of olfactory receptor genes which are derived from three large gene families namely the odorant receptors gustatory receptors and ionotropic receptors Spatial expression patterns of olfactory receptors in diverse chemosensory tissues provide information on divergent functions with regards to ecologically relevant behaviours On the other hand characterization of olfactory receptor activation profiles or deorphanization provides complimentary data on the molecular range of receptivity to the fundamental unit of the olfactory sense The aim of this Research Topic is to give an update on the breadth and depth of research currently in progress related to understanding the molecular mechanisms of insect chemoreception with specific emphasis on the olfactory receptors *Petrophysics* Djebbar Tiab, Erle C. Donaldson, 2024-03-27 Petrophysics a seminal text in the field authored by recognized experts now in its 5th edition delivers information for reservoir engineers production engineers and geoscience students fundamental to understanding rock fluid interaction and critical to maximizing reservoir performance while minimizing emissions and environmental impacts This new edition lays a foundation through an introduction to petroleum geology including an overview of pre and post carbon emission concerns porosity and permeability formation resistivity and water saturation capillary pressure wettability

Nonlinear Analysis in Neuroscience and Behavioral Research Tobias A. Mattei, 2016-10-31 Although nonlinear dynamics have been mastered by physicists and mathematicians for a long time as most physical systems are inherently nonlinear in nature the recent successful application of nonlinear methods to modeling and predicting several evolutionary ecological physiological and biochemical processes has generated great interest and enthusiasm among researchers in computational neuroscience and cognitive psychology Additionally in the last years it has been demonstrated that nonlinear analysis can be successfully used to model not only basic cellular and molecular data but also complex cognitive processes and behavioral interactions The theoretical features of nonlinear systems such as unstable periodic orbits period doubling bifurcations and phase space dynamics have already been successfully applied by several research groups to analyze the behavior of a variety of neuronal and cognitive processes Additionally the concept of strange attractors has led to a new understanding of information processing which considers higher cognitive functions such as language attention memory and decision making as complex systems emerging from the dynamic interaction between parallel streams of information flowing between highly interconnected neuronal clusters organized in a widely distributed circuit and modulated by key central nodes Furthermore the paradigm of self organization derived from the nonlinear dynamics theory has offered an interesting account of the phenomenon of emergence of new complex cognitive structures from random and non deterministic patterns similarly to what has been previously observed in nonlinear studies of fluid dynamics Finally the challenges of coupling massive amount of data related to brain function generated from new research fields in experimental neuroscience such as

magnetoencephalography optogenetics and single cell intra operative recordings of neuronal activity have generated the necessity of new research strategies which incorporate complex pattern analysis as an important feature of their algorithms Up to now nonlinear dynamics has already been successfully employed to model both basic single and multiple neurons activity such as single cell firing patterns neural networks synchronization autonomic activity electroencephalographic measurements and noise modulation in the cerebellum as well as higher cognitive functions and complex psychiatric disorders Similarly previous experimental studies have suggested that several cognitive functions can be successfully modeled with basis on the transient activity of large scale brain networks in the presence of noise Such studies have demonstrated that it is possible to represent typical decision making paradigms of neuroeconomics by dynamic models governed by ordinary differential equations with a finite number of possibilities at the decision points and basic heuristic rules which incorporate variable degrees of uncertainty This e book has include frontline research in computational neuroscience and cognitive psychology involving applications of nonlinear analysis especially regarding the representation and modeling of complex neural and cognitive systems Several experts teams around the world have provided frontline theoretical and experimental contributions as well as reviews perspectives and commentaries in the fields of nonlinear modeling of cognitive systems chaotic dynamics in computational neuroscience fractal analysis of biological brain data nonlinear dynamics in neural networks research nonlinear and fuzzy logics in complex neural systems nonlinear analysis of psychiatric disorders and dynamic modeling of sensorimotor coordination Rather than a comprehensive compilation of the possible topics in neuroscience and cognitive research to which non linear may be used this e book intends to provide some illustrative examples of the broad range of

Alzheimer's Disease and the Fornix Kenichi Oishi,Constantine G. Lyketsos,2016-09-14 This e book focuses primarily on the role of the fornix as a functional prognostic and diagnostic marker of Alzheimer s disease AD and the application of such a marker in clinical practice Researchers have long been focused on the cortical pathology of AD since the most important pathologic features are the senile plaques found in the cortex and the neurofibrillary tangles and neuronal loss that start from the entorhinal

cortex and the hippocampus In addition to gray matter structures histopathological studies indicate that the white matter is also altered in AD The fornix is a white matter bundle that constitutes a core element of the limbic circuits and is one of the most important anatomical structures related to memory The fornices originate from the bilateral hippocampi merge at the midline of the brain again divide into the left and right side and then into the precommissural and the postcommissural fibers and terminate at the septal nuclei nucleus accumbens precommissural fornix and hypothalamus postcommissural fornix These functional and anatomical features of the fornix have naturally captured researchers attention as possible diagnostic and prognostic markers of AD Growing evidence indicates that the alterations seen in the fornix are potentially a good marker with which to predict future conversion from mild cognitive impairment to AD and even from a cognitively normal state to AD The degree of alteration is correlated with the degree of memory impairment indicating the potential for the use of the fornix as a functional marker Moreover there have been attempts to stimulate the fornix to recover the cognitive function lost with AD Our goal is to provide information about the status of current research and to facilitate further scientific and clinical advancement in this topic

Enabling Secure Subsurface Storage in Future Energy Systems J.M. Miocic, N. Heinemann, K. Edlmann, J. Alcalde, R.A. Schultz, 2023-08-31 The secure storage of energy and carbon dioxide in subsurface geological formations plays a crucial role in transitioning to a low carbon energy system The suitability and security of subsurface storage sites rely on the geological and hydraulic properties of the reservoir and confining units Additionally their ability to withstand varying thermal mechanical hydraulic biological and chemical conditions during storage operations is essential Each subsurface storage technology has distinct geological requirements and faces specific economic logistical public and scientific challenges As a result certain sites can be better suited than others for specific low carbon energy applications This Special Publication provides a summary of the state of the art in subsurface energy and carbon dioxide storage It includes 20 case studies that offer insights into site selection characterization of reservoir processes the role of caprocks and fault seals as well as monitoring and risk assessment needs for subsurface storage operations
