

Part A Multiple Choice (2-points each)

1. *Light is usually thought of as wave-like in nature and electrons as particle-like. In which one of the following instances does light behave as a particle or does an electron behave as a wave?*

- A) A Young's double slit experiment is conducted using blue light.
- B) X-rays are used to examine the crystal structure of sodium chloride.
- C) Water is heated to 99.0°C in a microwave oven.
- D) An electron enters a parallel plate capacitor, which deflects the electron downward.
- E) A beam of electrons is diffracted as it passes through a narrow slit.

2. *What is the name given to the particle-like entities that compose electromagnetic waves?*

- A) Phonons
- B) Photons
- C) Mesons
- D) Leptons
- E) Electromagnons

3. *For which one of the following problems did Max Planck make contributions that eventually led to the development of the "quantum" hypothesis?*

- A) photoelectric effect
- B) uncertainty principle
- C) blackbody radiation curves
- D) the motion of the earth in the ether
- E) the invariance of the speed of light in a vacuum

4. *Which one of the following pairs of characteristics of light is best explained by assuming that light can be described in terms of photons?*

- A) photoelectric effect and the effect observed in Young's experiment
- B) diffraction and the formation of atomic spectra
- C) polarization and the photoelectric effect
- D) existence of line spectra and the photoelectric effect
- E) polarization and the formation of line spectra

Introductory Physics for the Life Sciences: (Volume 2) David V. Guerra,2023-06-06 This textbook provides an accessible introduction to physics for undergraduate students in the life sciences including those majoring in all branches of biology biochemistry and psychology and students working on pre professional programs such as pre medical pre dental and physical therapy The text is geared for the algebra based physics course often named College Physics in the United States The order of topics studied in this volume requires students to first understand a concept such as the conservation of energy momentum voltage or current the change in a quantity such as entropy or the rules of ray and wave optics Then students apply these concepts to solve problems in the areas of thermodynamics electrical circuit optics and atomic and nuclear physics Throughout the text these quantity based applications are used to understand systems that are critical to the understanding of biological systems such as the entropy of evolution the signal down the axon of a nerve cell the optics of the eye and the operation of a laser This is part 2 of a two volume set volume 1 introduced students to the methods of mechanics and applied these problem solving techniques to explicitly biological topics such as the sedimentation rate of red blood cells in haemoglobin the torques and forces on a bacterium employing a flagellum to propel itself through a viscous fluid and the terminal velocity of a protein moving in a gel electrophoresis device Key features Organized and centered around analysis techniques not traditional mechanics and E M Presents a unified approach in a different order meaning that the same laboratories equipment and demonstrations can be used when teaching the course Demonstrates to students that the analysis and concepts they are learning are critical to the

understanding of biological systems
