Investigations of atomic force microscopy-based nano-machining to reveal sub-surface ferroelectric domain configurations in ultrathin films** Lynette Keeney,Louise Colfer,Debismita Dutta,Michael Schmidt,Guannan Wei,2023-10-20 Multiferroic materials encompassing simultaneous ferroelectric and ferromagnetic polarization states are enticing multi state materials for memory scaling beyond existing technologies Aurivillius phase B6TFMO Bi6TixFeyMnzO18 is a unique room temperature multiferroic material that could ideally be suited to future production of revolutionary memory devices As miniaturization of electronic devices continues it is crucial to characterize ferroelectric domain configurations at very small sub 10 nm thickness Direct liquid injection chemical vapor deposition allows for frontier development of ultrathin films at fundamental close to unit cell dimensions However layer by layer growth of ultrathin complex oxides is subject to the formation of surface contaminants and 2D islands and pits which can obscure visualization of domain patterns using piezoresponse force microscopy PFM Herein we apply force from a sufficiently stiff diamond cantilever while scanning over ultrathin films to perform atomic force microscopy AFM based nano machining of the surface layers Subsequent lateral PFM imaging of sub surface layers uncovers 45 orientated striped twin domains entirely distinct from the randomly configured piezoresponse observed for the pristine film surface Furthermore our investigations indicate that these sub surface domain structures persist along the in plane directions throughout the film depth down to thicknesses of less than half of an Aurivillius phase unit cell 2 5 nm Thus AFM based nano machining in conjunction with PFM allows demonstration of stable in plane ferroelectric domains at thicknesses lower than previously determined for multiferroic B6TFMO These findings demonstrate the technological potential of Aurivillius phase B6TFMO for future miniaturized memory storage devices Next generation devices based on ultrathin multiferroic tunnel junctions are projected      Chemistry of the Elements N. N. Greenwood,A. Earnshaw,2012-12-02 When this innovative textbook first appeared in 1984 it rapidly became a great success throughout the world and has already been translated into several European and Asian languages Now the authors have completely revised and updated the text including more than 2000 new literature references to work published since the first edition No page has been left unaltered but the novel features which proved so attractive have been retained The book presents a balanced coherent and comprehensive account of the chemistry of the elements for both undergraduate and postgraduate students This crucial central area of chemistry is full of ingenious experiments intriguing compounds and exciting new discoveries The authors specifically avoid the term inorganic chemistry since this evokes an outmoded view of

chemistry which is no longer appropriate in the final decade of the 20th century Accordingly the book covers not only the inorganic chemistry of the elements but also analytical theoretical industrial organometallic bio inorganic and other cognate areas of chemistry The authors have broken with recent tradition in the teaching of their subject and adopted a new and highly successful approach based on descriptive chemistry The chemistry of the elements is still discussed within the context of an underlying theoretical framework giving cohesion and structure to the text but at all times the chemical facts are emphasized Students are invited to enter the exciting world of chemical phenomena with a sound knowledge and understanding of the subject to approach experimentation with an open mind and to assess observations reliably This is a book that students will not only value during their formal education but will keep and refer to throughout their careers as chemists Completely revised and updated Unique approach to the subject More comprehensive than competing titles **A Nation on the March** René Richards,1987 Machining Dynamics Tony L.
