**Boundary Value Problems in Mechanics of Nonhomogeneous Fluids** S.N. Antontsev, A.V. Kazhikov, V.N. Monakhov, 1989-12-18 The objective of this book is to report the results of investigations made by the authors into certain hydrodynamical models with nonlinear systems of partial differential equations The investigations involve the results concerning Navier Stokes equations of viscous heat conductive gas incompressible nonhomogeneous fluid and filtration of multi phase mixture in a porous medium The correctness of the initial boundary value problems and the qualitative properties of solutions are also considered The book is written for those who are interested in the theory of nonlinear partial differential equations and their applications in mechanics Applied mechanics reviews ,1948 Turbulence, Strange Attractors And Chaos David Ruelle, 1995-09-28 The present collection of reprints covers the main contributions of David Ruelle and coauthors to the theory of chaos and its applications Several of the papers reproduced here are classics in the field Others that were published in less accessible places may still surprise the reader The collection contains mathematical articles relevant to chaos specific articles on the theory and articles on applications to hydrodynamical turbulence chemical oscillations etc A sound judgement of the value of techniques and applications is crucial in the interdisciplinary field of chaos For a critical assessment of what has been achieved in this area the present volume is an invaluable contribution *U.S. Government Research & Development Reports* ,1970 Publications United States.
