be attractive for a fast service deployment and for extending the typical service area of terrestrial systems. In comparison with traditional wide area networks a characteristic of satellite communication systems is their ability in broadcasting and multicasting multimedia information flows anywhere over the satellite coverage. The papers presented in this volume highlight key areas such as Satellite Network Architectures, Services and Applications, Mobile Satellite Systems and Services and Hybrid Satellite and Terrestrial Networks. Mobility will inevitably be one of the main characteristics of future networks terminals and applications and thus extending and integrating fixed network protocols and services to mobile systems represents one of the main issues of present networking. The secondary focus of this volume is on challenges of mobility that is on technologies, protocols and services for the support of seamless and nomadic user access to new classes of applications in person to person, device to device and device to person environments. The book comprises recent results of research and development in the following areas: Seamless mobility, Mobile ad hoc and sensor networks, Analysis, simulation and measurements of mobile and wireless systems, Integration and inter working of wired and wireless networks, QoS in mobile and wireless networks, Future trends and issues concerning mobility. This state of the art volume contains a collection of papers from two of the workshops of the 18th IFIP World Computer Congress held August 22-27 2004 in Toulouse, France: the Workshop on Broadband Satellite Communication Systems and the Workshop on the Challenges of Mobility.

The Physics and Applications of High Brightness Electron Beams Luigi Palumbo, Jamie Rosenzweig, Luca Serafini, 2007. These proceedings comprise cutting edge contributions by researchers at the frontiers of beam physics: free electron based light sources and advanced accelerators. It represents a snapshot of activity in these fields at a critical historical juncture where rapid experimental progress is being reported and new facilities such as X-ray free electron lasers are under construction. The volume features invited contributions from leading researchers from the international beam physics community that summarize the state of the art research in individual topics as well as timely contributions from participants that arose during the workshop itself.
