At The Edge Of Uncertainty 11 Discoveries Taking Science:

At the Edge of Uncertainty Michael Brooks, 2014-06-26 The atom The Big Bang DNA Natural selection All ideas that have revolutionised science and that were dismissed out of hand when they first appeared The surprises haven't stopped here Michael Brooks bestselling author of *13 Things that Don't Make Sense* investigates the new wave of unexpected insights that are shaping the future of scientific discovery Through eleven radical new insights Brooks takes us to the extreme frontiers of what we understand about the world He journeys from the observations that might rewrite our history of the universe through the novel biology behind our will to live and on to the physiological root of consciousness Along the way he examines how the underrepresentation of women in clinical trials means that many of the drugs we use are less effective on women than men and more likely to have adverse effects explores how merging humans with other species might provide a solution to the shortage of organ donors and finds out if there is such a thing as the will to live When we think about science we often think of iron clad facts But today more than ever our unshakeable truths have been shaken apart As Michael Brooks reveals the best science is about open mindedness imagination and a love of mind boggling adventures at the edge of uncertainty

Life's Greatest Secret Matthew Cobb, 2015-06-11 *Life's Greatest Secret* is the story of the discovery and cracking of the genetic code This great scientific breakthrough has had far reaching consequences for how we understand ourselves and our place in the natural world The code forms the most striking proof of Darwin's hypothesis that all organisms are related holds tremendous promise for improving human well being and has transformed the way we think about life Matthew Cobb interweaves science biography and anecdote in a book that mixes remarkable insights theoretical dead ends and ingenious experiments with the pace of a thriller He describes cooperation and competition among some of the twentieth century's most outstanding and eccentric minds moves between biology physics and chemistry and shows the part played by computing and cybernetics The story spans the globe from Cambridge MA to Cambridge UK New York to Paris London to Moscow It is both thrilling science and a fascinating story about how science is done **Scientific Babel** Michael

Gordin, 2015-03-19 Today the language of science is English But the dominance of this particular language is a relatively recent phenomenon and far from a foregone conclusion In a sweeping history that takes us from antiquity to the modern day Michael D Gordin untangles the web of politics money personality and international conflict that created the monoglot world of science we now inhabit Beginning with the rise of Latin Gordin reveals how we went on to use and then lose Dutch Italian Swedish and many other languages on the way and sheds light on just how significant language is in the nationalistic realm of science just one word mistranslated into German from Russian triggered an inflammatory face off between the two countries for the credit of having discovered the periodic table Intelligent revealing and full of compelling stories *Scientific Babel* shows how the world has shaped science just as much as science has transformed the world *Into the Headwinds*

Terryl Givens, Nathaniel Givens, 2022-10-18 A deeper look at how people individually and collectively form religious beliefs

and what that means for faith in an increasingly secular culture Secularism is increasingly a fact of life in Western society But that doesn't necessarily mean that faith is harder than it has been before Even in the past when organized religion enjoyed more widespread cultural acceptance there were still obstacles to true belief Today the obstacles are different but faith is still viable Acclaimed author Terryl Givens and his son Nathaniel Givens combine their respective areas of expertise to offer a fresh take on religious belief through the lens of contemporary research on psychology cognition and human nature They also address two of faith's foremost modern day antagonists rationalism the myth that humans can or should make the majority of their choices based on logical thought and scientism the myth that science is the only reliable means of discovering truth After reckoning with the surprising fact that people often don't even understand their own beliefs and are influenced in ways they seldom perceive the authors go on to describe genuine faith as an act of will an effortful response to the deepest yearnings of the mind and heart that engenders moral responsibility the ability to embrace uncertainty the motivation and means to relate to others and the capacity to apprehend reality through nonrational means Written for truth seekers who may or may not belong to religious communities *Into the Headwinds* is less a work of apologetics than an inquiry into the role that faith can and does still play in a society where participation in institutional religion is declining precipitously Terryl and Nathaniel Givens propose that to reclaim the power of genuine faith we need to first acknowledge the reality that religious belief is hard It always has been and it always will be But perhaps instead of a hindrance that is its most important aspect

Destruction Arthur M. Diamond, 2019 Life improves under the economic system often called entrepreneurial capitalism or creative destruction but more accurately called innovative dynamism *Openness to Creative Destruction Sustaining Innovative Dynamism* shows how innovation occurs through the efforts of inventors and innovative entrepreneurs how workers on balance benefit and how good policies can encourage innovation The inventors and innovative entrepreneurs are often cognitively diverse outsiders with the courage and perseverance to see and pursue serendipitous discoveries or slow hunches Arthur M Diamond Jr shows how economies grow where innovative dynamism through leapfrog competition flourishes as in the United States from roughly 1830-1930 Consumers vote with their feet for innovative new goods and for process innovations that reduce prices benefiting ordinary citizens more than the privileged elites Diamond highlights that because breakthrough inventions are costly and difficult patents can be fair rewards for invention and can provide funding to enable future inventions He argues that some fears about adverse effects on labor market are unjustified since more and better new jobs are created than are destroyed and that other fears can be mitigated by better policies The steady growth in regulations often defended on the basis of the precautionary principle increases the costs to potential entrepreneurs and thus reduces innovation The Great Fact of economic history is that after at least 40 000 years of mostly poor nasty brutish and short humans in the last 250 years have started to live substantially longer and better lives Diamond increases understanding of why **Το σώμα: Ένας ταξιδιωτικός οδηγός** Bill Bryson, 2019-11-28 *DNA* DNA Bryson *Play Among Books* Miro
