

## 41G Astronomy - Spectra Lab

By: \_\_\_\_\_

### Part 1: Flame Tests

### Part 2: Atomic Spectra

### Part 3: Applications of Spectra

In Part One, wooden splints dipped in solutions of metal salts are heated using a Bunsen burn producing different colored flames. By comparing the color given off by an unknown with the known metal salts, the identity of the metal salt can be determined. In Part Two, electricity is passed through the gas discharge tube resulting in different colors. When the light is passed through a diffraction grating, it is broken into components, producing a line spectrum of the element. A comparison of the line spectrum with those of known gases will allow one to determine the identity of the unknown gas. Also, you will investigate the visible light emission of "general" light sources. In Part Three, you will research various applications and/or natural occurrences of line spectra such as astronomy, aurora borealis, fireworks and neon lights.

Laboratory Experiments in Physics for Modern Astronomy Leslie M. Golden, 2012-11-14 This book presents experiments which will teach physics relevant to astronomy The astronomer as instructor frequently faces this need when his college or university has no astronomy department and any astronomy course is taught in the physics department The physicist as instructor will find this intellectually appealing when faced with teaching an introductory astronomy course From these experiments the student will acquire important analytical tools learn physics appropriate to astronomy and experience instrument calibration and the direct gathering and analysis of data Experiments that can be performed in one laboratory session as well as semester long observation projects are included *Astrochemistry* Olivia Harper Wilkins, Geoffrey A. Blake, 2021-07-21 The answers to some of the most fundamental questions in science lie between the stars in molecular clouds that serve as celestial laboratories Disentangling the chemistries in extraterrestrial environments can provide clues about how planets form and shed light on problems in terrestrial chemistry that are difficult to investigate in the lab and even the origins of life Astrochemistry takes you on a tour of the molecular universe through time and space starting with the emergence of matter about 13.8 billion years ago From there the tour visits the interstellar medium with an emphasis on molecular clouds where stars are born It then goes through different evolutionary stages of stars and planets and the chemistry that emerges alongside them before ending in our own solar system where you will learn about chemical delivery by objects such as comets and meteorites **Reports on Astronomy** Derek McNally, 2012-12-06 IAU Transactions are published as a volume corresponding to each General Assembly Volume A is produced prior to the Assembly and contains Reports on Astronomy prepared by each Commission President The intention is to summarize the astronomical results that have affected the work of the Commission since the production of the previous Reports up to a time which is about one year prior to the General Assembly Volume B is produced after the Assembly and contains accounts of Commission Meetings which were held together with other material The reports included in the present volume range from outline summaries to lengthy compilations and references Exercises in Astronomy J. specialized equipment beyond a pencil straightedge and calculator The necessary mathematical background is introduced on an as needed basis for every activity and is accessible for most undergraduate students Important Notice The digital edition of this book is missing some of the images or content found in the physical edition

**Handbook of High-resolution Spectroscopy** Martin Quack, Frederic Merkt, 2011-09-26 The field of High Resolution Spectroscopy has been considerably extended and even redefined in some areas Combining the knowledge of spectroscopy laser technology chemical computation and experiments Handbook of High Resolution Spectroscopy provides a comprehensive survey of the whole field as it presents itself today with emphasis on the recent developments This essential handbook for advanced research students graduate students and researchers takes a systematic approach through the range of wavelengths and includes the latest advances in experiment and theory that will help and guide future applications The first comprehensive survey in high resolution molecular spectroscopy for over 15 years Brings together the knowledge of spectroscopy laser technology chemical computation and experiments Brings the reader up to date with the many advances that have been made in recent times Takes the reader through the range of wavelengths covering all possible techniques such as Microwave Spectroscopy Infrared Spectroscopy Raman Spectroscopy VIS UV and VUV Combines theoretical computational and experimental aspects Has numerous applications in a wide range of scientific domains Edited by two leaders in this field Provides an overview of rotational vibration electronic and photoelectron spectroscopy Volume 1 Introduction Fundamentals of Molecular Spectroscopy Volume 2 High Resolution Molecular Spectroscopy Methods and Results Volume 3 Special Methods Applications
