At The Edge Of Uncertainty 11 Discoveries Taking Science By Surprise:

At the Edge of Uncertainty Michael Brooks, 2014-06-26 The atom The Big Bang DNA Natural selection All ideas that have revolutionised science and that were dismissed out of hand when they first appeared The surprises haven't stopped here Michael Brooks bestselling author of 13 Things that Don't Make Sense investigates the new wave of unexpected insights that are shaping the future of scientific discovery Through eleven radical new insights Brooks takes us to the extreme frontiers of what we understand about the world He journeys from the observations that might rewrite our history of the universe through the novel biology behind our will to live and on to the physiological root of consciousness Along the way he examines how the underrepresentation of women in clinical trials means that many of the drugs we use are less effective on women than men and more likely to have adverse effects explores how merging humans with other species might provide a solution to the shortage of organ donors and finds out if there is such a thing as the will to live When we think about science we often think of iron clad facts But today more than ever our unshakeable truths have been shaken apart As Michael Brooks reveals the best science is about open mindedness imagination and a love of mind boggling adventures at the edge of uncertainty

How to Bake Pi Eugenia Cheng, 2015-06-04 M bies bagels Euclid's flourless chocolate cake and apple pi this is maths but not as you know it In *How to Bake Pi* mathematical crusader and star baker Eugenia Cheng has rustled up a batch of delicious culinary insights into everything from simple numeracy to category theory the mathematics of mathematics via Fermat Poincaré and Riemann Maths is much more than simultaneous equations and p^2 it is an incredibly powerful tool for thinking about the world around us And once you learn how to think mathematically you'll never think about anything cakes custard bagels or doughnuts not to mention fruit crumble kitchen clutter and Yorkshire puddings the same way again Stuffed with moreish puzzles and topped with a generous dusting of wit and charm *How to Bake Pi* is a foolproof recipe for a mathematical feast Previously published under the title *Cakes Custard Category Theory* **Into the Headwinds** Terryl Givens, Nathaniel Givens, 2022-10-18 A deeper look at how people individually and collectively form religious beliefs and what that means for faith in an increasingly secular culture Secularism is increasingly a fact of life in Western society But that doesn't necessarily mean that faith is harder than it has been before Even in the past when organized religion enjoyed more widespread cultural acceptance there were still obstacles to true belief Today the obstacles are different but faith is still viable Acclaimed author Terryl Givens and his son Nathaniel Givens combine their respective areas of expertise to offer a fresh take on religious belief through the lens of contemporary research on psychology cognition and human nature They also address two of faith's foremost modern day antagonists rationalism the myth that humans can or should make the majority of their choices based on logical thought and scientism the myth that science is the only reliable means of discovering truth After reckoning with the surprising fact that people often don't even understand their own beliefs and are influenced in ways they seldom perceive the authors go on to describe genuine faith as an act of will an effortful response to

the deepest yearnings of the mind and heart that engenders moral responsibility the ability to embrace uncertainty the motivation and means to relate to others and the capacity to apprehend reality through nonrational means Written for truth seekers who may or may not belong to religious communities *Into the Headwinds* is less a work of apologetics than an inquiry into the role that faith can and does still play in a society where participation in institutional religion is declining precipitously Terryl and Nathaniel Givens propose that to reclaim the power of genuine faith we need to first acknowledge the reality that religious belief is hard It always has been and it always will be But perhaps instead of a hindrance that is its most important aspect *Life's Greatest Secret* Matthew Cobb, 2015-06-11 *Life's Greatest Secret* is the story of the

discovery and cracking of the genetic code This great scientific breakthrough has had far reaching consequences for how we understand ourselves and our place in the natural world The code forms the most striking proof of Darwin's hypothesis that all organisms are related holds tremendous promise for improving human well being and has transformed the way we think about life Matthew Cobb interweaves science biography and anecdote in a book that mixes remarkable insights theoretical dead ends and ingenious experiments with the pace of a thriller He describes cooperation and competition among some of the twentieth century's most outstanding and eccentric minds moves between biology physics and chemistry and shows the part played by computing and cybernetics The story spans the globe from Cambridge MA to Cambridge UK New York to Paris London to Moscow It is both thrilling science and a fascinating story about how science is done *Aliens* Jim

Al-Khalili, 2016-11-03 Do Aliens Exist And if they do what would they look like Where would they live Would they be conscious beings And what would happen if they found us These are the biggest questions we've ever asked and here Professor Jim Al Khalili theoretical physicist and host of BBC Radio Four's *The Life Scientific* blasts off in search of answers Coming with him are Martin Rees Ian Stewart Louisa Preston Monica Grady Sara Seager Paul Davies and a crack team of scientists and experts who've made it their life's work to discover the truth So get ready to visit the ice boulders and hydrocarbon lakes of Saturn's moon Titan meet the tiny eight legged critters that could survive in space and learn about the neuroscience behind belief in alien abductions Along the way you'll enter the mind of an octopus work out the probability of us finding an alien civilisation and discover whether quantum computing might hold the secret to life itself Lively curious and filled with scientific insights fresh from the cutting edge of the Galaxy *Aliens* is the perfect book for anyone who has ever looked up into the starry sky and wondered are we alone **Scientific Babel** Michael Gordin, 2015-03-19 Today the language of science is

English But the dominance of this particular language is a relatively recent phenomenon and far from a foregone conclusion In a sweeping history that takes us from antiquity to the modern day Michael D Gordin untangles the web of politics money personality and international conflict that created the monoglot world of science we now inhabit Beginning with the rise of Latin Gordin reveals how we went on to use and then lose Dutch Italian Swedish and many other languages on the way and sheds light on just how significant language is in the nationalistic realm of science just one word mistranslated into German

from Russian triggered an inflammatory face off between the two countries for the credit of having discovered the periodic table Intelligent revealing and full of compelling stories Scientific Babel shows how the world has shaped science just as much as science has transformed the world Openness to Creative Destruction Arthur M. Diamond,2019 Life improves under the economic system often called entrepreneurial capitalism or creative destruction but more accurately called innovative dynamism Openness to Creative Destruction Sustaining Innovative Dynamism shows how innovation occurs through the efforts of inventors and innovative entrepreneurs how workers on balance benefit and how good policies can encourage innovation The inventors and innovative entrepreneurs are often cognitively diverse outsiders with the courage and perseverance to see and pursue serendipitous discoveries or slow hunches Arthur M Diamond Jr shows how economies grow where innovative dynamism through leapfrog competition flourishes as in the United States from roughly 1830 1930 Consumers vote with their feet for innovative new goods and for process innovations that reduce prices benefiting ordinary citizens more than the privileged elites Diamond highlights that because breakthrough inventions are costly and difficult patents can be fair rewards for invention and can provide funding to enable future inventions He argues that some fears about adverse effects on labor market are unjustified since more and better new jobs are created than are destroyed and that other fears can be mitigated by better policies The steady growth in regulations often defended on the basis of the precautionary principle increases the costs to potential entrepreneurs and thus reduces innovation The Great Fact of economic history is that after at least 40 000 years of mostly poor nasty brutish and short humans in the last 250 years have started to live substantially longer and better lives Diamond increases understanding of why **Play Among Books** Miro Roman,Alice _ch3n81,2021-12-06 How does coding change the way we think about architecture This question opens up an important research perspective In this book Miro Roman and his AI Alice_ch3n81 develop a playful scenario in which they propose coding as the new literacy of information They convey knowledge in the form of a project model that links the fields of architecture and information through two interwoven narrative strands in an infinite flow of real books Focusing on the intersection of information technology and architectural formulation the authors create an evolving intellectual reflection on digital architecture and computer science The Rise of Science Peter Shaver,2018-07-17 How did science rise up to so dramatically change our world and where will it take us in the future This book gives a unique and broad overview A brief history reveals the major phases and turning points in the rise of science from the earliest civilizations to the present How was science discovered Why did it disappear a few times When did it become modern A critical assessment examines how science actually happens the triumphs the struggles the mistakes and the luck Science today is endlessly fascinating and this book explores the current exponential growth curiosity driven vs goal oriented research big and small science the support of science the relation of science to society philosophy and religion and the benefits and dangers of science Finally a glimpse into the future Will the current pace of science continue Will we ever go backwards again What remains to be discovered Can

science ever be complete What can we imagine for the distant future This book will be of wide interest to the general reader as well as to students and working scientists This book provides a fresh unique and insightful coverage of the processes of science its impact on society and our understanding of the world based on the author s experience gained from a lifetime in science Ron Ekers FRS CSIRO Fellow CSIRO Astronomy Space Science former President of the International Astronomical Union Peter Shaver s comprehensive and lively survey deserves a wide readership Scientific discoveries are part of our global culture and heritage and they underpin our lives It s fascinating to learn how they were made and how they fit into the grand scheme This book isn t just for scientists it s written for all of us Martin Rees FRS Astronomer Royal former President of the Royal Society and former Master of Trinity College Cambridge This book offers a wonderfully concise and accessible insight into science its history breadth and future prospects Peter Shaver gives a feeling for what it actually means to be a practicing scientist Stephen Simpson FRS Academic Director Charles Perkins Centre School of Life and Environmental Sciences University of Sydney
