Electromagnetic Fields (300 Hz to 300 GHz) World Health Organization, WHO/IRPA Task Group on Electromagnetic Fields (300 Hz to 300 GHz), 1993 A critical review of all data relevant to the assessment of human health effects associated with exposure to electromagnetic fields in the frequency range of 300 Hz to 300 GHz Emphasis is placed on new data that shed light on the interactions of electromagnetic fields with biological systems and on the specific biological effects and responses that result Over 500 recent studies were rigorously assessed Sources of exposure considered include broadcasting systems microwave ovens induction heating stoves visual display units television receivers dielectric heaters for industrial use radar installations and medical devices and procedures A chapter devoted to interaction mechanisms reviews the electrical properties of tissues and discusses direct and indirect interaction mechanisms including the interaction of biological bodies with electrical charges induced on ungrounded or poorly grounded metallic objects such as cars cranes wires and fences A review of the large body of data from cellular and animal studies considers the strength of evidence pointing to effects on the nervous endocrine and immune systems on

reproduction and on pre and post natal development The report concludes that most of the biological effects of acute exposure are consistent with responses to induced heating Data on human responses are assessed in the next chapter which addresses concern about the effects of locally elevated temperatures resulting from the deposition of radio frequency energy and the possible dangers particularly for pregnancy outcome linked to the use of visual display units The report concludes that current data provide no clear evidence of detrimental health effects in humans exposed to radiofrequency fields The remaining chapters provide guidelines for health hazard assessment and standards for protection Electromagnetic Fields and Radiation Riadh W.Y. Habash,2018-10-08 This reference explores the sources characteristics bioeffects and health hazards of extremely low frequency ELF fields and radio frequency radiation RFR analyzing current research as well as the latest epidemiological studies to assess potential risks associated with exposure and to develop effective safety guidelines Compiles reports and investigations from four decades of study on the effect of nonionizing electromagnetic fields and radiation on human health Summarizing modern engineering approaches to control exposure Electromagnetic Fields and Radiation discusses EM interaction mechanisms in biological systems Explorations into the impact of EM fields on free radicals cells tissues organs whole organisms and the population Regulatory standards in the United States Canada Europe and Asia Pacific Evaluation of incident fields from various EM sources Measurement surveys for various sites including power lines substations mobile systems cellular base stations broadcast antennas traffic radar devices heating equipment and other sources Dosimetry techniques for the determination of internal EM fields Conclusions reached by the Food and Drug Administration World Health Organization and other institutions *Exposure to High Frequency Electromagnetic Fields, Biological Effects and Health Consequences (100 KHz - 300 GHz)* Paolo Vecchia,2009
