 work at L J Broutman and Associates UBA and as a lecturer in the seminars on this topic co sponsored by UBA and Society of

 reference for professionals as well as a text book at the junior or senior level in undergraduate programs The main theme of
 this book is what to do with computed stress To approach the theme effectively I have taken the stress category ap proach to
 stress analysis Such an approach is being successfully used in the nuclear power field In plastics this approach helps in the
 prediction of long term behavior of structures To maintain interest I have limited derivations and proofs to a minimum and
 provided them if at all as flow charts In this way I believe that one can see better the connection between the variables
