Software Development and Reality Construction Christiane Floyd,Heinz Züllighoven,Reinhard Budde,Reinhard Keil-Slawik,2012-12-06 The present book is based on the conference Software Development and Reality Construction held at SchloB Eringerfeld in Germany September 25 30 1988 This was organized by the Technical University of Berlin TUB in cooperation with the German National Research Center for Computer Science GMD Sankt Augustin and sponsored by the Volkswagen Foundation whose financial support we gratefully acknowledge The conference was an interdisciplinary scientific and cultural event aimed at promoting discussion on the nature of computer science as a scientific discipline and on the theoretical foundations and systemic practice required for human oriented system design In keeping with the conversational style of the conference the book comprises a series of individual contributions arranged so as to form a coherent whole Some authors reflect on their practice in computer science and system design Others start from approaches developed in the humanities and the social sciences for understanding human learning and creativity individual and cooperative work and the interrelation between technology and organizations Thus each contribution makes its specific point and can be read on its own merit But at the same time it takes its place as a

chapter in the book along with all the other contributions to give what seemed to us a meaningful overall line of argumentation This required careful editorial coordination and we are grateful to all the authors for bearing with us throughout the slow genesis of the book and for complying with our requests for extensive revision of some of the manuscripts

User-Centred Requirements for Software Engineering Environments David J. Gilmore,Russel L. Winder,Francoise Detienne,2013-06-29 The idea for this workshop originated when I came across and read Martin Zelkowitz's book on *Requirements for Software Engineering Environments* the proceedings of a small workshop held at the University of Maryland in 1986 Although stimulated by the book I was also disappointed in that it didn't adequately address two important questions Whose requirements are these and Will the environment which meets all these requirements be usable by software engineers And thus was the decision made to organise this workshop which would explicitly address these two questions As time went by setting things up it became clear that our workshop would happen more than five years after the Maryland workshop and thus at the same time as addressing the two questions above this workshop would attempt to update the Zelkowitz approach Hence the workshop acquired two halves one dominated by discussion of what we already know about usability problems in software engineering and the other by discussion of existing solutions technical and otherwise to these problems This scheme also provided a good format for bringing together those in the HeI community concerned with the human factors of software engineering and those building tools to solve acknowledged but rarely understood problems
