Knowledge-Based Intelligent Information and Engineering Systems Vasile Palade,2003-08-28 During recent decades we have witnessed not only the introduction of automation into the work environment but we have also seen a dramatic change in how automation has influenced the conditions of work While some 30 years ago the addition of a computer was considered only for routine and boring tasks in support of humans the balance has dramatically shifted to the computer being able to perform almost any task the human is willing to delegate The very fast pace of change in processor and information technology has been the main driving force behind this development Advances in automation and especially Artificial Intelligence AI have enabled the formation of a rather unique team with human and electronic members The team is still supervised by the human with the machine as a subordinate associate or assistant sharing responsibility authority and autonomy over many tasks The requirement for teaming human and machine in a highly dynamic and unpredictable task environment has led to impressive achievements in many supporting technologies These include methods for system analysis design and engineering and in particular for information processing for cognitive and complex knowledge 1 engineering

Artificial Intelligence, Design Law and Fashion Hasan Kadir Yilmaztekin,2022-12-30 Artificial intelligence AI now infiltrates our culture After a couple of difficult winters AI today is a word on everybody s lips and it attracts everyone s attention regardless of whether they are experts or not From Apple s Siri to Amazon s Alexa Tesla s auto driving cars to facial

recognition systems in CCTV cameras Netflix's film offering services to Google's search engine we live in a world of AI goods The advent of AI powered technologies increasingly affects people's lives across the globe As a tool for productivity and cost efficiency AI also shapes our economy and welfare AI generated designs and works are becoming more popular Today AI technologies can generate several intellectual creations Fashion is one of the industries that AI can profoundly impact AI tools and devices are currently being used in the fashion industry to create fashion models fabric and jewellery designs and clothing When we talk about AI generated designs we instead focus on the fruits of innovation more best selling apparels more fashionable designs and more fulfilment of customer expectations without paying heed to who the designer is Designers invest a lot of talent time and finances into designing and creating each article of clothing and accessory before they release their work to the public Pattern drafting is the first and most important step in dressmaking Designers typically start with a general sketch on paper add styles elements and colours revise and refine everything and finally deliver their design to dressmakers AI accelerates this time consuming and labour intensive process Yet the full legal consequences of AI in fashion industry are often forgotten An AI device's ability to generate fashion designs raises the question of who will own intellectual property rights over the fashion designs Will it be the fashion designer who hires or contracts with the AI programmer Will it be the programmer Will it be the AI itself Or will it be a joint work of humans and computers And who will be liable for infringement deriving from use of third party material in AI generated fashion designs This book explores answers to these questions within the framework of EU design and copyright laws It also crafts a solution proposal based on a three step test and model norms which could be used to unleash the authors rights holders and infringers around AI generated fashion designs
