Army Science and Technology Analysis for Stabilization and Reconstruction Operations Richard Chait, 2006 Examines capability gaps and science and technology needs of the Army to facilitate post conflict reconstruction and stabilization operations *Cyberpower and National Security* Franklin D. Kramer, Stuart H. Starr, Larry K. Wentz, 2009 This book creates a framework for understanding and using cyberpower in support of national security Cyberspace and cyberpower are now critical elements of international security United States needs a national policy which employs cyberpower to support its national security interests **Making the Soldier Decisive on Future Battlefields** National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee on Making the Soldier Decisive on Future Battlefields, 2013-06-10 The U S military does not believe its soldiers sailors airmen and marines should be engaged in combat with adversaries on a level playing field Our combat individuals enter engagements to win To that end the United States has used its technical prowess and industrial capability to develop decisive weapons that overmatch those of potential enemies In its current engagement what has been identified as an era of persistent conflict the nation s most important weapon is the dismounted soldier operating in small units Today s soldier must be prepared to contend with both regular and irregular adversaries Results in Iraq and Afghanistan show that while the U S soldier is a formidable fighter the contemporary suite of equipment and support does not afford the same high degree of overmatch capability exhibited by large weapons platforms yet it is the soldier who ultimately will play the decisive role in restoring stability Making the Soldier Decisive on Future Battlefields establishes the technical requirements for overmatch capability for dismounted soldiers operating individually or in small units It prescribes technological and organizational capabilities needed to make the dismounted soldier a decisive weapon in a changing uncertain and complex future environment and provides the Army with 15 recommendations on how to focus its efforts to enable the soldier and tactical small unit TSU to achieve overmatch

Naval Peacekeeping and Humanitarian Operations James J. Wirtz, Jeffrey A. Larsen, 2008-10-29 This edited volume explores stability security transition and reconstruction operations SSTR highlighting the challenges and opportunities they create for the US Navy The book argues that SSTR operations are challenging because they create new missions and basing modes and signal a return to traditional naval methods of operation Mission accomplishment requires collaboration with a wide range of actors representing governmental non governmental and commercial organizations which often creates politically and bureaucratically charged issues for those involved However although from a traditional warfighting perspective stability operations might be viewed as having little to do with preparing for high intensity conventional combat these kinds of operations in fact correspond to traditional missions related to diplomacy engagement maritime domain awareness piracy and smuggling and intervention to quell civil disturbances SSTR operations can be therefore depicted as a return to traditional naval operations albeit operations that might not be universally welcomed in all quarters
