Questions With Correct Answers 2025

what mag modes are available? - correct answer.if you have a 16" II, you can have 12,9,6, and 4.5 "

Compton effect - correct answer.hits the outer electron, incomplete transfer of energy, electron released and a low energy xray is deflected

photoelectric absorption - correct answer.x-ray totally absorbed by inner shell electron, x-ray overcomes binding energy and knock out the electron and an outer shell electron takes it place. When the outer electron moves to its new place, a characteristic x-ray is formed

what is the product of photoelectric absorption? - correct answer.electron flying , characteristic x-ray, and positive ion

coherent scatter - correct answer.aka Thompson scatter, Rayleigh scatter or classical scatter. x-ray is absorbed by entire atom and is sent off in another direction with no energy loss

does coherent scatter result in patient dose? - correct answer.No, this reaction only causes excitation of the atoms shells, but there is not energy transfer nor does the x-ray lose energy (isotropic)

what is the chance of coherent scatter occurring? - correct answer.5%

attenuation - correct answer.the drop of intensity of the beam due to absorption and scatter

photoelectric interaction is dependent on - correct answer. Z^3 and $1/E^3$

as photon energy increases there is more - correct answer.penetration and a decrease in tissue interactions

Compton is dependent on - correct answer.energy level (the higher it is, the greater probability of occurrence), electrons/ gram

attenuation equation - correct answer. $I = I_0 e^{(-\mu x)}$

initial energy x $e^{(-\mu x)}$ (attenuation factor x tissue thickness)= resulting energy

initial energy- resulting energy= absorbed energy
