

Articulation Index

- Articulation index was developed to predict speech intelligibility given a knowledge of the noise environment.
- AI is a good predictor of speech intelligibility for normal and hearing impaired with mild-moderate hearing loss.

Articulation and Intelligibility Jont B. Allen, 2022-05-31 Immediately following the Second World War between 1947 and 1955 several classic papers quantified the fundamentals of human speech information processing and recognition In 1947 French and Steinberg published their classic study on the articulation index In 1948 Claude Shannon published his famous work on the theory of information In 1950 Fletcher and Galt published their theory of the articulation index a theory that Fletcher had worked on for 30 years which integrated his classic works on loudness and speech perception with models of speech intelligibility In 1951 George Miller then wrote the first book Language and Communication analyzing human speech communication with Claude Shannon's just published theory of information Finally in 1955 George Miller published the first extensive analysis of phone decoding in the form of confusion matrices as a function of the speech to noise ratio This work extended the Bell Labs speech articulation studies with ideas from Shannon's Information theory Both Miller and Fletcher showed that speech as a code is incredibly robust to mangling distortions of filtering and noise Regrettably much of this early work was forgotten While the key science of information theory blossomed other than the work of George Miller it was rarely applied to aural speech research The robustness of speech which is the most amazing thing about the speech code has rarely been studied It is my belief i.e. assumption that we can analyze speech intelligibility with the scientific method The quantitative analysis of speech intelligibility requires both science and art The scientific component requires an error analysis of spoken communication which depends critically on the use of statistics information theory and psychophysical methods The artistic component depends on knowing how to restrict the problem in such a way that progress may be made It is critical to tease out the relevant from the irrelevant and dig for the key issues This will focus us on the decoding of nonsense phonemes with no visual component which have been mangled by filtering and noise This monograph is a summary and theory of human speech recognition It builds on and integrates the work of Fletcher Miller and Shannon The long term goal is to develop a quantitative theory for predicting the recognition of speech sounds In Chapter 2 the theory is developed for maximum entropy MaxEnt speech sounds also called nonsense speech In Chapter 3 context is factored in The book is largely reflective and quantitative with a secondary goal of providing an historical context along with the many deep insights found in these early works

Articulation And Intelligibility Jont B. Allen, 2005 Immediately following the Second World War between 1947 and 1955 several classic papers quantified the fundamentals of human speech information processing and recognition In 1947 French and Steinberg published their classic study on the articulation index In 1948 Claude Shannon published his famous work on the theory of information In 1950 Fletcher and Galt published their theory of the articulation index a theory that Fletcher had worked on for 30 years which integrated his classic works on loudness and speech perception with models of speech intelligibility In 1951 George Miller then wrote the first book Language and Communication analyzing human speech communication with Claude Shannon's just published theory of information Finally

in 1955 George Miller published the first extensive analysis of phone decoding in the form of confusion matrices as a function of the speech to noise ratio This work extended the Bell Labs speech articulation studies with ideas from Shannon's Information theory Both Miller and Fletcher showed that speech as a code is incredibly robust to mangling distortions of filtering and noise

Clinical Management of Articulatory and Phonologic Disorders Mary Ellen Gordon-Brannan, Curtis E. Mutual Intelligibility between Closely Related Languages Charlotte Gooskens, 2024-10-21 This book provides a detailed overview of research on mutual intelligibility between closely related languages The book is organized around three sections which explore different facets of mutual intelligibility research The first section outlines how to measure levels of intelligibility and its linguistic and extra linguistic determinants The second part grapples with questions and issues which arise once the measuring tools are established A final section reflects on the practical and theoretical value of studying mutual intelligibility including issues related to language planning and policy such as cultural communicative educational and economical matters

Investigations in Clinical Phonetics and Linguistics Fay Windsor, M. Louise Kelly, Nigel Hewlett, 2012-12-06 Investigations in Clinical Phonetics and Linguistics is a sequel to the eighth meeting of the International Clinical Phonetics and Linguistics Association attended by delegates from 26 different countries This book reflects the scope of the subject area of clinical phonetics and linguistics the balance of input into it with respect to the different kinds of research being carried on and the representation of researchers from different parts of the world Its scope includes the application of all levels of linguistic analysis and the chapters of the book have been ordered as far as possible according to linguistic level beginning with pragmatics and ending with acoustics It will be immediately apparent that a greater number of chapters are concerned with applications of phonetics and phonology than with any other levels

Springer Handbook of Speech Processing Jacob

Benesty, M. M. Sondhi, Yiteng Huang, 2007-11-28 This handbook plays a fundamental role in sustainable progress in speech research and development With an accessible format and with accompanying DVD Rom it targets three categories of readers graduate students professors and active researchers in academia and engineers in industry who need to understand or implement some specific algorithms for their speech related products It is a superb source of application oriented authoritative and comprehensive information about these technologies this work combines the established knowledge derived from research in such fast evolving disciplines as Signal Processing and Communications Acoustics Computer Science and Linguistics A Walk in the Landscape of Language Simon Young, 2018-10-12 The works of Heidegger are perhaps the most influential in contemporary philosophy yet they are not only least readily understood but even what understanding means in this context is usually overlooked This book addresses Heidegger's dense prose seeking an understanding of language which leads to a journey that allows the emergence of the terrain revealed when travelling with the philosopher This book offers an experience of walking with Heidegger when considering language but refuses a conceptual analysis of the text As such it offers a profound experience and yet refuses to reduce Heidegger's texts to simple formulae The texts used include Heidegger's magnum opus Being and Time and many of his essays and lectures as well as drawing on the writings of other thinkers *Dysarthria* B. E. Murdoch, 1998 **NASA Technical Report** , 1966

Assessment and Prediction of Speech Quality in Telecommunications Sebastian Möller, 2000-08-31 The quality of telecommunication voice services has become an important issue due to the evolving and liberalized market With the advent of new technologies however a diversification takes place which makes it necessary to carefully plan and observe network quality Speech communication quality as it is perceived by the user or customer of a service carries a multidimensional nature a fact which must be reflected in its assessment and prediction with quality models In this book a new schematic is developed which classifies different entities contributing to the quality of a service It takes into account conversational user as well as service related contributions Starting from this concept perceptively relevant constituents of speech communication quality are identified A simulation model is developed and implemented based on physical elements of the transmission configuration It allows the perceptively most relevant parameters to be simulated in real time and for the conversation situation The book gives a valuable overview on assessment needed for reliably measuring the different quality dimensions For the planning of telephone networks quality models are presented which aim at predicting mouth to ear quality as it would be perceived by a user of the system These models are an important tool for the planner of telecommunication networks as they allow the expected quality to be estimated in advance even before the network has been set up Two well known models the SUBMOD and the E model are analyzed in more detail with an emphasis on the psychoacoustic and psychophysical backgrounds It turns out that model predictions are satisfactory for many types of degradations but they can still be improved especially for new types of impairments Proposals are made for quality model

enhancement and combined approaches Due to its handbook character this book is an invaluable source of background information for anyone working in the field of speech quality assessment as well as telephone network planning and operation

Syncom Engineering Report ,1967 This report the second of two volumes on the Syncom Satellite System will cover the launch of the Syncom III satellite its performance during the first 100 days in orbit the televising of the 1964 Summer Olympic Games by means of the satellite and various communications tests conducted with it Syncom III was launched on 19 August 1964 All three stages of the Thrust Augmented Delta vehicle performed satisfactorily and subsequent orbital maneuvers placed the satellite into a nominally synchronous equatorial stationary orbit over the International Date Line Live television of the Olympic Games from Japan establishment of the first 24 hour per day 7 day per week reliable communications network across the Pacific Ocean The attainment of a stationary orbit which permits the use of fixed ground antennas without the expense of costly tracking systems and Syncom III s excellent performance indicate the operational and economic advantages of the synchronous communication satellite

Acoustics of Long Spaces Jian Kang,2002 Acoustics is a major concern in many long spaces such as road or railway tunnels underground railway stations corridors concourses and urban streets The specific problems of such irregularly shaped spaces ranging from noise pollution in streets and tunnels to poor speech intelligibility of public address systems in railway stations are not dealt with by classic room acoustic theory This state of the art exposition of acoustics of long spaces presents the fundamentals of acoustic theory and calculation formulae for long spaces as well as giving guidelines for practical design

Human Presence Stephen A. Erickson,1984 In *Human Presence* Erickson offers a thoughtful study of some fundamental features of human nature central to a theoretical and therapeutic understanding of human existence Though the language employed is largely philosophical interfaces with psychoanalysis and religion are made in order to stimulate dialogue that reaches beyond the traditional boundaries of discipline It is toward more such dialogue that *Human Presence* serves as preparation The author provides a probing contrast between traditional psychoanalysis and existential conceptions of time consciousness and he articulates the issues involved in experience or lived time in their centrality to human self understanding The author suggests how both conceptions the existential and the psychoanalytic enlarge yet limit awareness and insight In a revealing way *Human Presence* raises deep and unavoidable issues regarding the human in us all Stephen A Erickson is Professor of Philosophy Pomona College and Claremont Graduate School and is a guest faculty member of the Southern California Psychoanalytic Institute
