Robust Intelligent Systems Alfons Schuster, 2008-08-06 Our time recognizes robustness as an important all pervading feature in the world around us Despite its omnipresence robustness is not entirely understood rather difficult to define and despite its obvious value in many situations rather difficult to achieve One of the goals of this edited book is to report on the topic of robustness from a variety and diverse range of fields and perspectives We are

interested for instance in fundamental strategies nature applies to make systems robust and arguably intelligent and how these strategies may hold as general design principles in modern technology A particular focus is on computer based systems and applications This in mind the book has four main sections Part I has a look at robustness in terms of underlying technologies and infrastructures upon which many computer based intelligent systems reside and investigates robustness on the hardware and software level but also in larger environments such as the Internet and self managing systems The contributions in Part II target robustness in research areas that are inspired by biology including brain computer interfaces biological networks and biological immune systems for example Part III involves the exciting field of artificial intelligence The chapters here discuss the value of robustness as a general design principle for artificial intelligence stressing its potential in areas such as humanoid robotics and image processing

The Development of an Integrated Planning and Decision Support System (IPDSS) for Land Consolidation Demetris Demetriou, 2013-11-01. This book provides an extensive review of three interrelated issues: land fragmentation, land consolidation and land reallocation, and it presents in detail the theoretical background, design, development and application of a prototype integrated planning and decision support system for land consolidation. The system integrates geographic information systems (GIS) and artificial intelligence techniques, including expert systems (ES) and genetic algorithms (GAs) with multi-criteria decision methods (MCDM), both multi-attribute MADM and multi-objective MODM. The system is based on four modules for measuring land fragmentation, automatically generating alternative land redistribution plans, evaluating those plans and automatically designing the land partitioning plan. The presented research provides a new scientific framework for land consolidation planning, both in terms of theory and practice, by presenting new findings and by developing better tools and methods embedded in an integrated GIS environment. It also makes a valuable contribution to the fields of GIS and spatial planning as it provides new methods and ideas that could be applied to improve the former for the benefit of the latter in the context of planning support systems. From the 1960s, ambitious research activities set out to observe regarding IT support of the complex and time-consuming redistribution processes within land consolidation, without any practically relevant results until now. This scientific work is likely to close that gap. This distinguished publication is highly recommended to land consolidation planning experts, researchers and academics alike. Prof. Dr. Ing. Joachim Thomas, Münster, Germany. Planning support systems take new scientific tools based on GIS optimisation and simulation and use these to inform the process of plan making and policy. This book is one of the first to show how this can be consistently done, and it is a triumph of demonstrating how such systems can be made operational. Essential reading for planners, analysts and GI scientists. Prof. Michael Batty, University College London.

contributed greatly to the growth of data traffic on the Internet Access technologies and object constraints associated with the IoT can cause performance and security problems This relates to important challenges such as the control of radio communications and network access the management of service quality and energy consumption and the implementation of security mechanisms dedicated to the IoT In response to these issues this book presents new solutions for the management and control of performance and security in the IoT The originality of these proposals lies mainly in the use of intelligent techniques This notion of intelligence allows among other things the support of object heterogeneity and limited capacities as well as the vast dynamics characterizing the IoT

Smart Home Systems Mahmoud Al-Qutayri,2010-02-01 Smart homes are intelligent environments that interact dynamically and respond readily in an adaptive manner to the needs of the occupants and changes in the ambient conditions The realization of systems that support the smart homes concept requires integration of technologies from different fields Among the challenges that the designers face is to make all the components of the system interact in a seamless reliable and secure manner Another major challenge is to design the smart home in a way that takes into account the way humans live and interact This later aspect requires input from the humanities and social sciences fields The need for input from diverse fields of knowledge reflects the multidisciplinary nature of the research and

development effort required to realize smart homes that are acceptable to the general public The applications that can be supported by a smart home are very wide and their degree of sophistication depends on the underlying technology used Some of the application areas include monitoring and control of appliances security telemedicine entertainment location based services care for children and the elderly etc This book consists of eleven chapters that cover various aspects of smart home systems Intelligent Systems for Science and Information Liming Chen,Supriya Kapoor,Rahul Bhatia,2014-01-25 The book Intelligent Systems for Science and Information is the remarkable collection of extended chapters from the selected papers that were published in the proceedings of Science and Information SAI Conference 2013 It contains twenty four chapters in the field of Intelligent Systems which received highly recommended feedback during SAI Conference 2013 review process All chapters have gone through substantial extension and consolidation and were subject to another round of rigorous review and additional modification These chapters represent the state of the art of the cutting edge research and technologies in related areas and can help inform relevant research communities and individuals of the future development in Science and Information
