Alexandria Egypt The Submerged Royal Quarters Underwater Archeology:

Alexandria Franck Goddio, 1998-01-01 This publication presents the results of the work carried out in Alexandria by the Institut Européen d'Archéologie Sous Marine. The first topographical surveys made in 1992 through to the archaeological campaigns of 1996 and 1997 are reported and analysed in detail, determining the ancient topography of the Ptolemaic harbour and the city of Cleopatra. Discussed in length are the problems of ancient harbour installations and observations on the enigmas posed by the fields of submerged ruins. In particular, the epigraphy and study of the pharaonica and comparisons with the texts of ancient writers together with the study of statuary are found within this work. The Architecture of Alexandria and Egypt, C. 300 B.C. to A.D. 700 Judith McKenzie, Rhys-Davids Junior Research Fellow in Archaeology. Judith McKenzie, Peter Roger Stuart Moorey, 2007-01-01 This masterful history of the monumental architecture of Alexandria as well as of the rest of Egypt encompasses an entire millennium from the city's founding by Alexander the Great in 331 B.C. to the years just after the Islamic conquest of A.D. 642. Long considered lost beyond recall, the architecture of ancient Alexandria has until now remained mysterious. But here Judith McKenzie shows that it is indeed possible to reconstruct the city and many of its buildings by means of meticulous exploration of archaeological remains, written sources and an array of other fragmentary evidence. The book approaches its subject at the macro and the micro level, from city planning, building types and designs to architectural style. It addresses the interaction between the imported Greek and native Egyptian traditions, the relations between the architecture of Alexandria and the other cities and towns of Egypt as well as the wider Mediterranean world and Alexandria's previously unrecognized role as a major source of architectural innovation and artistic influence. Lavishly illustrated with new plans of the city in the Ptolemaic, Roman and Byzantine periods, reconstruction drawings and photographs, the book brings to life the ancient city and uncovers the true extent of its architectural legacy in the Mediterranean world.

approach the book uses scientific findings and historical evidence to support its conclusions connecting to fields like oceanography and climate science By examining underwater sites globally this study offers a comprehensive look at Earth Sciences Geography and History as told by the ocean s hidden treasures **Geophysical Phenomena and the Alexandrian Littoral** Niki Evelpidou,Christos Repapis,Harry Tzalas,Costas Synolakis,2019-07-18 This book presents the geomorphology and recent geoarchaeological history of Alexandria which has been repeatedly struck by natural disasters The Coastal area offers archaeological evidence burial sites quarry activities and ancient building remnants as well as geomorphological features all revealing a complex evolution of the coastal zone The Attacking Ocean Brian Fagan,2013-06-06 The past fifteen thousand years the entire span of human civilization have witnessed dramatic sea level changes which began with rapid global warming at the end of the Ice Age when sea levels were more than 700 feet below modern levels Over the next eleven millennia the oceans climbed in fits and starts These rapid changes had little effect on those humans who experienced them partly because there were so few people on earth and also because they were able to adjust readily to new coastlines Global sea levels stabilised about six thousand years ago except for local adjustments that caused often quite significant changes to places like the Nile Delta So the curve of inexorably rising seas flattened out as urban civilizations developed in Egypt Mesopotamia and South Asia The earth s population boomed quintupling from the time of Christ to the Industrial Revolution The threat from the oceans increased with our crowding along shores to live fish and trade Since 1860 the world has warmed significantly and the ocean s climb has speeded The sea level changes are cumulative and gradual no one knows when they will end The Attacking Ocean tells a tale of the rising complexity of the relationship between humans and the sea at their doorsteps a complexity created not by the oceans which have changed but little What has changed is us and the number of us on earth **Bulletin - Société archéologique d'Alexandrie** Jam'iyat al-Āthār bi-al-Iskandarīyah,2009 **Palaeo-environmental Dynamics and Archaeological Sites** Kosmas Pavlopoulos,2009 **Building for Eternity** C.J. Brandon,R.L. Hohlfelder,M.D. Jackson,J.P. Oleson,2014-08-29 One marker of the majesty of ancient Rome is its surviving architectural legacy the stunning remains of which are scattered throughout the circum Mediterranean landscape Surprisingly one truly remarkable aspect of this heritage remains relatively unknown There exists beneath the waters of the Mediterranean the physical remnants of a vast maritime infrastructure that sustained and connected the western world s first global empire and economy The key to this incredible accomplishment and to the survival of structures in the hostile environment of the sea for two thousand years was maritime concrete a building material invented and then employed by Roman builders on a grand scale to construct harbor installations anywhere they were needed rather than only in locations with advantageous geography or topography This book explains how the Romans built so successfully in the sea with their new invention The story is a stimulating mix of archaeological geological historical and chemical research with relevance to both ancient and modern technology It also breaks new ground in bridging the gap

between science and the humanities by integrating analytical materials science history and archaeology along with underwater exploration The book will be of interest to anyone interested in Roman architecture and engineering and it will hold special interest for geologists and mineralogists studying the material characteristics of pyroclastic volcanic rocks and their alteration in seawater brines The demonstrable durability and longevity of Roman maritime concrete structures may be of special interest to engineers working on cementing materials appropriate for the long term storage of hazardous substances such as radioactive waste A pioneering methodology was used to bore into maritime structures both on land and in the sea to collect concrete cores for testing in the research laboratories of the CTG Italcementi Group a leading cement producer in Italy the University of Berkeley and elsewhere The resulting mechanical chemical and physical analysis of 36 concrete samples taken from 11 sites in Italy and the eastern Mediterranean have helped fill many gaps in our knowledge of how the Romans built in the sea To gain even more knowledge of the ancient maritime technology the directors of the Roman Maritime Concrete Study ROMACONS engaged in an ambitious and unique experimental archaeological project the construction underwater of a reproduction of a Roman concrete pier or pila The same raw materials and tools available to the ancient builders were employed to produce a reproduction concrete structure that appears to be remarkably similar to the ancient one studied during ROMACONS fieldwork between 2002-2009 This volume reveals a remarkable and unique archaeological project that highlights the synergy that now exists between the humanities and science in our continuing efforts to understand the past It will quickly become a standard research tool for all interested in Roman building both in the sea and on land and in the history and chemistry of marine concrete The authors also hope that the data and observations it presents will stimulate further research by scholars and students into related topics since we have so much more to learn in the years ahead
