**Faith after the Anthropocene** Matthew Wickman, Jacob Sherman, 2020-11-09 Recent decades have brought to light the staggering ubiquity of human activity upon Earth and the startling fragility of our planet and its life systems This is so momentous that many scientists and scholars now argue that we have left the relative climactic stability of the Holocene and have entered a new geological epoch known as the Anthropocene This emerging epoch may prompt us not only to reconsider our understanding of Earth systems but also to reimagine ourselves and what it means to be human How does the Earth s precarious state reveal our own How does this vulnerable condition prompt new ways of thinking and being The essays that are part of this collection consider how the transformative thinking demanded by our vulnerability inspires us to reconceive our place in the cosmos alongside each other and potentially before God Who are we after the concept of the Anthropocene What forms of thought and structures of feeling might attend us in this state How might we determine our values and to what do we orient our hopes

Faith a conceptual apparatus for engaging the unseen helps us weigh the implications of this massive but in some ways mysterious force on the lives we lead faith helps us visualize what it means to exist in this new and still emergent reality

**Just Technology** Thomas J. Siller, Gearold Johnson, 2022-05-31 To address the complexity of today's global challenges requires new ways of thinking The idea that technology is always the best maybe only approach worth taking needs to be reconsidered Sustainable approaches must also draw from non technological areas To that end this book introduces the idea of just technology by rephrasing the idea of just war in order to include concepts of sustainability in future engineering design The book begins by defining justice and relating these definitions to technology This is followed by illustrating several notions of sustainability and the awareness that needs to be focused on societal challenges due to the finite resources available in the natural world Four questions are enumerated to be addressed in order to qualify as a just use of technology 1 Is the harm being inflicted by the problem on the community the environment or humanity in general lasting serious and certain 2 Have all alternative solutions been investigated first including non technology based solutions Technology is the last choice not the first 3 Do we have confidence in the successful implementation of this technological solution and 4 Is the potential harm from the technological solution potentially worse than the issue being addressed Have all unintended consequences been considered that could arise from the technological solution The book ends with a description for implementing these questions into the traditional engineering design process Examples are included for reflection and help to understand how the design process proceeds
