Wasserman, 2018-12-12 Secondary mathematics teachers are frequently required to take a large number of mathematics courses including advanced mathematics courses such as abstract algebra as part of their initial teacher preparation program and or their continuing professional development The content areas of advanced and secondary mathematics are closely connected Yet despite this connection many secondary teachers insist that such advanced mathematics is unrelated to their future professional work in the classroom This edited volume elaborates on some of the connections between abstract algebra and secondary mathematics including why and in what ways they may be important for secondary teachers Notably the volume disseminates research findings about how secondary teachers engage with and make sense of abstract algebra ideas both in general and in relation to their own teaching as well as offers itself as a place to share practical ideas and resources for secondary mathematics teacher preparation and professional development Contributors to the book are scholars who have both experience in the mathematical preparation of secondary teachers especially in relation to abstract algebra as well as those who have engaged in related educational research The volume addresses some of the persistent issues in secondary mathematics teacher education in connection to advanced mathematics courses as well as situates and conceptualizes different ways in which abstract algebra might be influential for teachers of algebra Connecting Abstract Algebra to Secondary Mathematics for Secondary Mathematics Teachers is a productive resource for mathematics teacher educators who teach capstone courses or content focused methods courses as well as for abstract algebra instructors interested in making connections to secondary mathematics The Power of Teacher Leaders Nathan Bond, 2014-07-25 Co published with Kappa Delta Pi The Power of Teacher Leaders provides a comprehensive resource for understanding the ways that teacher leaders foster positive change

in their schools Distinct from school administrators teacher leaders are professionals who remain in the classroom and use their specialized knowledge and skills to improve student achievement influence others and build organizational capacity Written by leading educational researchers each chapter of The Power of Teacher Leaders describes a different way that teachers are leading Moving beyond the question of why teacher leaders are important and how such work is implemented the contributing scholars to this collection offer a critical examination of the field by presenting original research case studies and programs in practice Topics covered include how teachers become leaders their wide ranging leadership roles and the effects of teacher leadership on student academic success and school communities A cohesive edited collection this book demonstrates how teacher leaders play an increasingly active role in the improvement of student learning teacher professional development and school climate Teaching Secondary and Middle School Mathematics Daniel J. What Mathematics Do Students Know and How is that Knowledge Changing? Peter Kloosterman, Doris Mohr, Crystal Walcott, 2015-09-01 This volume is intended for researchers curriculum developers policy makers and classroom teachers who want comprehensive information on what students at grades 4 8 and 12 the grades assessed by NAEP can and cannot do in mathematics After two introductory chapters on the design of NAEP the volume contains a chapter on the challenges in analyzing NAEP data at the item level followed by five chapters that report 2005 through 2013 student performance on specific assessment items These chapters are organized by content area and then by topic e g understanding of place value knowledge of transformations ability to use metric and U S systems of measurement and thus provide baseline data on the proportion of students who are able to complete the mathematics tasks currently used in the upper elementary middle and high school mathematics curriculum Additional chapters focus on student reasoning U S performance on international assessments and using construct analysis rather than percent correct on clusters of items to understand student knowledge on specific mathematics topics Several themes emerge from the volume One is that while the rate of improvement in mathematics learning in grades 4 and 8 has slowed in recent years it has slowed more on some topics

than others Another is that relatively minor changes in wording can have significant effects on student performance and thus it is difficult to be specific about what students can do without knowing exactly what questions they were asked A third theme is that changes in performance over time can sometimes but not always be understood in terms of what students are taught For example there were substantial gains on several grade 4 items requiring understanding of fractions and that is probably because the amount of instruction on fractions in grades 3 and 4 has been increasing In contrast while relatively few twelfth grade students have ever been good at factoring trinomials performance on this skill seems to be decreasing This suggests that while more students are completing advanced mathematics courses in high school these courses are not helping in the area of factoring trinomials Finally there are limitations to using NAEP as a measure of student performance on the Common Core State Standards To the extent that NAEP can be used however the NAEP data show a substantial gap between expectations and performance Traditional Math: An effective strategy that teachers feel guilty using Barry Garelick, J. R. Wilson, 2022-11-04 Despite experiencing our teaching in different times we are both oriented to traditional math teaching It wasn t because we were both taught that way as some may believe but because that method worked for us and we have seen it work for our students It is efficient effective non confusing and helped our students develop mathematical reasoning understanding and confidence Most importantly it helped them to be successful So begins the book on traditional math which provides a glimpse of what explicit instruction looks like in the classroom for grades K through 8 Barry Garelick and J R Wilson are retired math teachers who describe the methods of traditionally taught math that they used in their teaching Their descriptions serve two purposes 1 It provides assurance to teachers who may already practice these methods that they are not alone and 2 For others it may provide some new ideas
