Essential Aspects of Atopic Dermatitis Georg Rajka, 2012-12-06 Le secret d ennuyer est celui de tout dire Voltaire Discours sur l homme Atopic dermatitis AD is frequently seen by dermatologists and pediatricians by allergologists and by many practitioners The amount of data on AD is vast as it has been recognized for a very long time has a worldwide distribution and has a chapter or section devoted to it in every textbook or review of skin diseases Difficulty arises in evaluating certain aspects of this complex disease for many studies have been concerned with only some of its facets and with small numbers of patients In addition a monograph on AD should also try to encompass the important theoretical aspects of this fascinating disease There fore the problem in presenting a monograph on AD lies more in the critical selection than in the gathering of information much of which is conflicting This applies both to basic data and to details Furthermore the many divergent opinions in almost every field make it extremely difficult to draw unanimous conclusions Consequently the author has no option but to quote antagonistic views try to make a compromise between these and express his own opinion based on clinical experience and fundamental literary work

AD has been made with studies successfully linking loss of function mutations in the genes encoding the epidermal structure protein filaggrin with the subsequent risk of developing AD. Another area of AD research apparently points us to the importance of the increased exposure to various environmental agents in particular those deprived of microbial stimuli which is known as the hygiene hypothesis. Other studies suggest specific mechanisms in AD whereby innate immune responses are functionally defective. Also the sweating disturbance in AD has recently received increasing attention. Nevertheless the most common emergent theme has been the role of adaptive immunity in providing cytokines and chemokines that sustain the recruitment, retention and activation of allergen specific T cells, dendritic cells, eosinophils, basophils and mast cells in the involved tissues. The key message of this book is to address the questions raised by dermatologists, pediatricians, practicing physicians, basic immunologists, biologists, pharmacologists and medical students on the pathogenesis, management and therapies of AD. To this end, virtually all chapters have been authored by original investigators who have contributed significantly to the establishment of current concepts.
