Astronomy: Globes, Orreries & Other Models Henry Reginald Calvert, 1968 **Clocks and Watches** Francis Alan Burnett Ward, 1973 Lighting ...: Early oil lamps, candles Science Museum (Great Britain), William Thomas O'Dea, 1966

Early Machine Tools Keith Reginald Gilbert, Science Museum (Great Britain), 1975 Ship Models: Sailing ships from 1700 A. D Basil W. Bathe, 1963 **The Wayward Comet** Martin Beech, 2016-01-01

Comets have not only blazed across the celestial vault throughout human history they have embellished the night sky since the Earth itself formed some 4.5 billion years ago. Comets were among the first born solid bodies in the solar system and their frozen nuclei tell of the primordial chemistry and chaos that ultimately resulted in the formation of the planets, the evolution of life and us. For all this however comets have long been celestial oddities they baffled our distant ancestors and human society continues to marvel and speculate wildly at their appearance even to the present day. Cutting against the perceived constancy of the stars comets seemingly present themselves at random times and they are often interpreted as harbingers of terrestrial change both good and ill. How then are we to tame the comet where do they form how do they move and can their appearances be predicted? Such questions have preoccupied astronomers for centuries but comets have only gradually allowed the secrets of their wayward flight to be revealed. In this book I explore the historical struggle to understand not only the place of comets within a societal context but also the scientific quest to make their paths amenable to mathematical certitude. The latter narrative is the more technical in content but it took tactile form with the invention in 1732 of the cometarium a mechanical device to demonstrate the first two of Kepler's planetary laws. And this development was later paralleled in the mid to late 19th century by the development of various mechanical devices analog computers to help obtain solutions to Kepler's Problem the problem which asks exactly where in its orbit is a given comet at some specific set time. The telling of the wayward comets story covers the past two millennia of human history and it takes us from the phenomenological musings of Aristotle through the exactitude of Newton's gravitational theory and calculus to the truly incredible study of comet 67P Churyumov Gerasimenko by the European Space Agency's Rosetta spacecraft in the modern era. , 1971 Technical Books in Print , 1974 British Books in Print , 1985 **Pure and Applied Science Books, 1876-1982** , 1982 Over 220 000 entries representing some 56 000 Library of Congress subject headings. Covers all disciplines of science and technology e.g. engineering agriculture and domestic arts. Also contains at least 5000 titles published before 1876. Has many applications in libraries information centers and other organizations concerned with scientific and technological literature. Subject index contains main listing of entries. Each entry gives cataloging as prepared by the Library of Congress. Author title indexes *Literature 1989, Part 1* Astronomisches Rechen-Institut, 2013-11-11 From the reviews *Astronomy and Astrophysics Abstracts* has appeared in semi annual volumes since 1969 and it has already become one of the fundamental publications in the fields of astronomy astrophysics and neighbouring sciences. It is the most

important English language abstracting journal in the mentioned branches The abstracts are classified under more than a hundred subject categories thus permitting a quick survey of the whole extended material The AAA is a valuable and important publication for all students and scientists working in the fields of astronomy and related sciences As such it represents a necessary ingredient of any astronomical library all over the world Space Science Review Dividing the whole field plus related subjects into 108 categories each work is numbered and most are accompanied by brief abstracts Fairly comprehensive cross referencing links relevant papers to more than one category and exhaustive author and subject indices are to be found at the back making the catalogues easy to use The series appears to be so complete in its coverage and always less than a year out of date that I shall certainly have to make a little more space on those shelves for future volumes

The Observatory Magazine **Theaters of Time and Space** Jordan Marche, 2005-06-08 Every year millions of Americans visit planetariums and are captivated by their strikingly realistic portrayal of the night sky Today it is indeed difficult to imagine astronomy education without these magnificent celestial theaters But projection planetariums first developed in Germany have been a part of American museum pedagogy only since the early twentieth century and were not widespread until the 1960s In this unique social history former planetarium director and historian of science Jordan D March II offers the first complete account of the community of individuals and institutions that during the period between 1930 and 1970 made planetariums the popular teaching aids they are today March addresses issues such as the role of gender and social developments within the planetarium community institutional patronage and the popularization of science He reveals how at different times various groups including financial donors amateur scientists and government officials viewed the planetarium as an instrument through which they could shape public understanding and perceptions of astronomy and space science Offering an insightful wide ranging look into the origins of an institution that has fascinated millions Theaters of Time and Space brings new perspectives to how one educational community changed the cultural complexion of science helped shape public attitudes toward the U S space program and even contributed to policy decisions regarding allocations for future space research

Information Handling in Astronomy - Historical Vistas Andre Heck, 2006-04-18 This book is dedicated to the memory of Gis le Mersch whose life ended prematurely in June 2002 Back in the 1970s when few people were using them Gis le introduced me to the arcane secrets of then advanced multivariate statistical methodologies I was already involved in more classical statistical studies undertaken at Paris Observatory with Jean Jung developing and applying maximum likelihood algorithms to stellar photometric and kinematic data in order to derive absolute luminosities distances and velocities in the solar neighborhood But what could be envisaged with those methodologies was something of another dimension for the first time I could really see how to extract information from massive amounts of data without calling for elaborated physical or mechanical theories Several pioneering applications were developed under Gis le's guidance and with her collaboration to study the delicate interface between spectroscopic and photometric data Thus errors in spectral classifications were

investigated as well as predictions of spectral classifications from photometric indices see Heck 1976 Heck et al 1977 Heck Mersch 1980 and Mersch Heck 1980 with very interesting results for the time. Gisle also took part in studies of period determination algorithms see Mersch Heck 1981 Manfroid et al 1983 and Heck et al 1985

Reports by the Juries on the Subjects in the Thirty Classes Into which the Exhibition was Divided, 1852 *Official Catalogue of the Great Exhibition of the Works of Industry of All Nations, 1851* Weltausstellung (1851, London), 1851 British Warships, 1845-1945 Basil W. Bathe, 1970 Journal of Astronomical History and Heritage, 2006 *The History and Practice of Ancient Astronomy* James Evans, 1998-10-01

The History and Practice of Ancient Astronomy combines new scholarship with hands-on science to bring readers into direct contact with the work of ancient astronomers. While tracing ideas from ancient Babylon to sixteenth-century Europe, the book places its greatest emphasis on the Greek period when astronomers developed the geometric and philosophical ideas that have determined the subsequent character of Western astronomy. The author approaches this history through the concrete details of ancient astronomical practice. Carefully organized and generously illustrated, the book can teach readers how to do real astronomy using the methods of ancient astronomers. For example, readers will learn to predict the next retrograde motion of Jupiter using either the arithmetical methods of the Babylonians or the geometric methods of Ptolemy. They will learn how to use an astrolabe and how to design sundials using Greek and Roman techniques. The book also contains supplementary exercises and patterns for making some working astronomical instruments, including an astrolabe and an equatorium. More than a presentation of astronomical methods, the book provides a critical look at the evidence used to reconstruct ancient astronomy. It includes extensive excerpts from ancient texts, meticulous documentation, and lively discussions of the role of astronomy in the various cultures. Accessible to a wide audience, this book will appeal to anyone interested in how our understanding of our place in the universe has changed and developed from ancient times through the Renaissance.
