Quality of Future Internet Services Jon Crowcroft, James Roberts, Michael I. Smirnov, 2003-06-29 The papers in this book present various viewpoints on the design and implementation of techniques for QoS engineering for Internet services They were selected from more than 70 submissions to the 1st International workshop on Quality of future Internet services QofIS organized by COST Action 263 The main focus of the papers is on the creation configuration and deployment of end to end services over a QoS assured Internet using the IntServ Integrated Services and DiffServ Differentiated Services models The main technical programme was completed by two keynote talks IETF Chair Fred Baker opened the workshop with a discussion on major Internet development directions and Andrew M Odlyzko of AT T Labs Research gave the closing talk on Internet charging issues The presentation of papers was organised in 9 sessions The emphasis of Session 1 is on an assessment of the essential building blocks for a QoS assured Internet i e queueing and scheduling which basically defines the space for end to end services The papers of this session discuss the bounds we may expect from these building blocks the issues of queueing and scheduling management and the parameters we need to tune in a dynamic implementation Flow control and congestion control cannot be considered without regard to the dominating impact of TCP The keyword of Session 2 is therefore Internet friendly adaptation Four papers in this session are complementary and together present an emerging understanding of a
