Affinity Chromatography And Biological Recognition:

Affinity Chromatography and Biological Recognition Irwin Chaiken, 2012-12-02 Affinity Chromatography and Biological Recognition contains manuscripts presented at the Fifth International Symposium on Affinity Chromatography and Biological Recognition convened in June 12-17 1983 at St John's College in Annapolis Maryland Organized into six parts encompassing 82 chapters the book begins by examining the growing synergism between affinity methods and the understanding and study of basic principles of biological recognition The book then focuses on the trends and progress in the design and application of affinity methods for isolation therapeutics diagnostics and biotechnology Significant chapters are devoted to the contributions of affinity methodology in such areas as cell membrane receptors quantitative properties of macromolecular interactions microscale analytical and preparative applications of high performance affinity chromatography antibodies as in vivo and in vitro diagnostic and therapeutic agents and drug targeting This volume will be a stimulus for broad and creative application of affinity concepts and methods in many fields of biomedical research and biotechnology

Chromatographic and Membrane Processes in Biotechnology C.A. Costa,Joaquim S. Cabral,2012-12-06 Separation processes in biotechnology are of increasing industrial importance since they entail the major costs of bioprocessing especially when high purity is required Chromatography and membranes are two of the most important technologies used for direct treatment of fermentation broths as well as for high resolution steps in product purification The theoretical foundations of chromatographic and membrane processes are well understood for the case of small molecules Nevertheless there is a need to adapt and further develop that knowledge to the processing of large biological molecules This is being achieved with the contribution of other areas like molecular biology and materials science The objective of this NATO Advanced Study Institute is to present an updated treatment of the fundamentals of chromatographic and membrane processes with special relevance in bioprocessing This volume collects the lectures presented at this Institute The lectures are arranged in five chapters Chapter I deals with chromatographic processes covering topics like equilibrium kinetics and

contacting devices Membrane processes and some applications in biotechnology are treated in chapter 2 Chapter 3 is devoted to affinity chromatographic and membrane processes Chapter 4 considers the current developments on chromatographic supports and membranes both from the constitutive materials and form points of view Scale up optimization and reaction separation integration are the topics covered in chapter 5 We are very grateful to all lecturers and participants that made possible this Institute Financial support from NATO Scientific Affairs Division INIC JNICT FLAD University of Ac ores and DRT Ac ores is gratefully acknowledged

Techniques in Molecular Biology John M. Walker, Wim Gaastra, 2012-12-06 The last few years have seen the rapid development of new methodology in the field of molecular biology New techniques have been regularly intro duced and the sensitivity of older techniques greatly improved upon Developments in the field of genetic engineering in particular have con tributed a wide range of new techniques In Volume 1 published in 1983 we introduced the reader to a selection of the more advanced analytical and preparative techniques which we considered to be frequently used by research workers in the field of molecular biology In choosing techniques for Volume 1 we obviously had to be selective and were unable to cover as broad a spectrum of techniques as we would have liked However the pro duction of Volume 2 has allowed us to develop the theme initiated in Volume 1 and also expand to include a wider range of subject areas As with Volume 1 the majority of chapters relate to nucleic acid method ology but we have also covered immunological methodology and protein 1 Obviously we purification techniques that were not included in Volume see Volume 2 as simply a continuation of Volume 1 As with Volume 1 a knowledge of certain basic biochemical techniques and terminology has been assumed However since many areas of molecular biology are developing at a formidable rate and constantly generating new termin ology a glossary of terms has been included
