9780521673761 **A Journey into Quantization in Astrophysics** Florentin Smarandache, Victor Christianto, 2013 The present book consists of 17 select scientific papers from ten years of work around 2003 2013 The topic covered here is quantization in Astrophysics We also discuss other topics for instance Pioneer spacecraft anomaly We discuss a number of sub topics for instance the use of Schrödinger equation to describe celestial quantization Our basic proposition here is that the quantization of planetary systems corresponds to quantization of circulation as observed in superfluidity And then we extend it further to the use of complex Ginzburg Landau equation to describe possible nonlinearity of planetary quantization The present book is suitable for young astronomers and astrophysicists as well as for professional astronomers who wish to update their knowledge in the vast topic of quantization in astrophysics This book is also suitable for college students who want to know more about this subject *Dissertation Abstracts International*, 2008 **Quantization and Discretization at Large Scales** Florentin Smarandache, V. Christianto, Pavel Pintr, 2012 **Comets III** Karen J Meech, Michael R Combi, Dominique Bockelée-Morvan, Sean N Raymond, Michael Zolensky, 2024 Comets III brings together the major breakthroughs in comet science over the last twenty years Edited by experts in the field this comprehensive volume explores recent advancements in space missions telescopic observations and robotic surveys providing new understandings of the composition origins and dynamics of comets Intended for both researchers and students Comets III offers insights into unresolved questions and sets the stage for future advancements *Formation, Evolution, and Dynamics of Young Solar Systems* Martin Pessah, Oliver Gressel, 2017-12-04 This book's interdisciplinary scope aims at bridging various communities 1 cosmochemists who study meteoritic samples from our own solar system 2 sub millimetre astronomers who measure the distribution of dust and gas of star forming regions and planet forming discs 3 disc modellers who describe the complex photo chemical structure of protoplanetary discs to fit these to observation 4 computational astrophysicists who attempt to decipher the dynamical structure of magnetised gaseous discs and the effects the resulting internal structure has on the aerodynamic redistribution of embedded solids 5 theoreticians in planet formation theory who aim to piece it all together eventually arriving at a coherent holistic picture of the architectures of planetary systems discovered by 6 the exoplanet observers who provide us with unprecedented samples of exoplanet worlds Combining these diverse fields the book sheds light onto the riddles that research on planet formation is currently confronted with and paves the way for a comprehensive understanding of the formation evolution and dynamics of young solar systems The chapters Chondrules Ubiquitous Chondritic Solids Tracking the Evolution of the Solar Protoplanetary Disk Dust Coagulation with Porosity Evolution and The Emerging Paradigm of Pebble Accretion are published open access under a CC BY 4.0 license via link.springer.com

Planetary Systems Ludwik Marian Celnikier, J. Thanh Van Tran, 1998 **Planetary Formation** Celestial Angell, Planetary formation is a captivating process that unfolds over millions to billions of years sculpting the celestial bodies that populate our cosmos It begins within the swirling embrace of a protoplanetary disk a vast expanse of gas and dust leftover from the birth of a new star Within this cosmic crucible tiny grains of dust collide and coalesce forming larger and larger aggregates known as planetesimals Through the relentless pull of gravity these planetesimals grow into protoplanets embryonic worlds with the potential to one day become full fledged planets As these protoplanets continue to accrete material from the surrounding disk they undergo a dynamic interplay of gravitational interactions collisions and mergers Some protoplanets may grow to become gas giants like Jupiter and Saturn while others may evolve into terrestrial planets such as Earth and Mars The process of planetary differentiation further shapes these nascent worlds as heavier elements sink toward their cores creating layered structures with distinct compositions and properties **Protostars and Planets VI** Henrik Beuther, Ralf S. Klessen, Cornelis Petrus Dullemond, Thomas K. Henning, 2014-12-18 The revolutionary discovery of thousands of confirmed and candidate planets beyond the solar system brings forth the most fundamental question How do planets and their host stars form and evolve Protostars and Planets VI brings together more than 250 contributing authors at the forefront of their field conveying the latest results in this research area and establishing a new foundation for advancing our understanding of stellar and planetary formation Continuing the tradition of the Protostars and Planets series this latest volume uniquely integrates the cross disciplinary aspects of this broad field Covering an extremely wide range of scales from

the formation of large clouds in our Milky Way galaxy down to small chondrules in our solar system Protostars and Planets VI takes an encompassing view with the goal of not only highlighting what we know but most importantly emphasizing the frontiers of what we do not know As a vehicle for propelling forward new discoveries on stars planets and their origins this latest volume in the Space Science Series is an indispensable resource for both current scientists and new students in astronomy astrophysics planetary science and the study of meteorites

Planetary Systems: Formation, Evolution, and Detection Bernard F. Burke, Jürgen H. Rahe, Elizabeth E. Roettger, 2012-12-06 Are there other planetary systems like ours Other planets like ours Is there life elsewhere in the Universe So asks Dr Lew Allen Jr in the Foreword In December of 1992 theorists observers and instrument builders gathered at the California Institute of Technology to discuss the search for answers to these questions The International Conference entitled Planetary Systems Formation Evolution and Detection and supported through NASA's newly formed TOPS Toward Other Planetary Systems program was the first of a series of conferences uniting researchers across disciplines and political boundaries to share thoughts and information on planetary systems The conference was sponsored by NASA hosted by JPL at Caltech and endorsed by the 1992 International Space Year Association These proceedings include discussions of topics ranging from stellar disk and planetary formation to new ways of searching for other stellar systems containing planets The authors represent a wide range of nationalities disciplines and points of view The second international conference took place in December of 1993
