Teaching Primary Science Constructively Keith Skamp, Christine Preston, 2017-09-05 Teaching Primary Science Constructively helps readers to create effective science learning experiences for primary students by using a constructivist approach to learning This best selling text explains the principles of constructivism and their implications for learning and teaching and discusses core strategies for developing science understanding and science inquiry processes and skills Chapters also provide research based ideas for implementing a constructivist approach within a number of content strands Throughout there are strong links to the key ideas themes and terminology of the revised Australian Curriculum Science This sixth edition includes a new introductory chapter addressing readers preconceptions and concerns about teaching primary science

A History of Women in Astronomy and Space Exploration Dale DeBakcsy, 2023-05-31 For the last four hundred years women have played a part far in excess of their numerical representation in the history of astronomical

research and discovery It was a woman who gave us our first tool for measuring the distances between stars and another who told us for the first time what those stars were made of It was women who first noticed the rhythmic noise of a pulsar the temperature discrepancy that announced the existence of white dwarf stars and the irregularities in galactic motion that informed us that the universe we see might be only a small part of the universe that exists And yet in spite of the magnitude of their achievements for centuries women were treated as essentially second class citizens within the astronomical community contained in back rooms forbidden from communicating with their male colleagues provided with repetitive and menial tasks and paid starvation wages This book tells the tale of how in spite of all those impediments women managed by sheer determination and genius to unlock the secrets of the night sky It is the story of some of science s most hallowed names Maria Mitchell Caroline Herschel Vera Rubin Nancy Grace Roman and Jocelyn Bell Burnell and also the story of scientists whose accomplishments were great but whose names have faded through lack of use Queen Seondeok of Korea who built an observatory in the 7th century that still stands today Wang Zhenyi who brought heliocentrism to China Margaret Huggins who perfected the techniques that allowed us to photograph stellar spectra and thereby completely changed the direction of modern astronomy and Hisako Koyama whose multi decade study of the sun s surface is as impressive a feat of steadfast scientific dedication as it is a rigorous and valuable treasure trove of solar data A History of Women in Astronomy and Space Exploration is not only a book however of those who study space but of those who have ventured into it from the fabled Mercury 13 whose attempt to join the American space program was ultimately foiled by betrayal from within to mythical figures like Kathryn Sullivan and Sally Ride who were not only pioneering space explorers but scientific researchers and engineers in their own rights aided in their work by scientists like Mamta Patel Nagaraja who studied the effects of space upon the human body and computer programmers like Marianne Dyson whose simulations prepared astronauts for every possible catastrophe that can occur in space Told through over 130 stories spanning four thousand years of humanity s attempt to understand its place in the cosmos A History of Women in Astronomy and Space Exploration brings us at last the full tale of women s evolution from instrument makers and calculators to the theorists administrators and explorers who have while receiving astonishingly little in return given us quite literally the universe

Zoology Jennifer Swanson, 2017-04-17 Love to work with animals Want to study them in the wild Wish you could become a zookeeper Become a zoologist Zoology is the study of everything having to do with animals including how and why they look act and behave in their environments and with other animals As a zoologist you might go on an expedition to Africa to study how elephants solve problems You could take care of tigers at a zoo You might even study how climate change can affect underwater creatures In Zoology Cool Women Who Work With Animals readers ages 9 to 12 are inspired by stories of women who have made great strides in a field that requires commitment courage and creativity to pursue Many of you have heard of the famous zoologists Charles Darwin Jack Hanna and Steve Irwin but do you know Terri Irwin Dian Fossey and

The International Day of the Girl Jessica Dee Humphreys,Rona Ambrose,2020-09-01 An introduction to the International Day of the Girl and why it matters Celebrated every October 11th the United Nation s International Day of the Girl was created to increase awareness of issues that affect girls and only girls and to encourage progress toward gender equality Nine stories inspired by the real life experiences of girls from all over the globe bring to light the importance of this day From gender based violence to illiteracy sanitation to child marriage each story is set in a different country and sensitively describes a situation in which the main character faces an inequity based on her gender and young age With

realistic yet hopeful outcomes for each story girls are presented as reformers not victims Ordinary girls making a powerful difference these stories will stir the activist in every child **Manchester Memoirs** ,1986 **After the War** Ruth H. Howes,Caroline L. Herzenberg,2015-12-01 This book examines the lives and contributions of American women physicists who were active in the years following World War II during the middle decades of the 20th century It covers the strategies they used to survive and thrive in a time where their gender was against them The percentage of PhD s in physics has risen for 6% in 1983 to 20% in 2012 an all time high for women By understanding the history of women in physics these gains can continue It discusses to major classes of women physicists those who worked on military projects and those who worked in industrial laboratories and at universities largely in the late 1940s and 1950s While it includes minimal discussion of physics and physicists in the 1960s and later this book focuses on the challenges and successes of women physicists in the years immediately following World War II and before the eras of affirmative actions and the use of the personal computer **New Formulas for America's Workforce** ,2003 **Diversity, Equity, and Inclusion in Astronomy** Jörg Matthias Determann,2023-11-14 Astronomy is a field concerned with matters very distant from Earth Most phenomena whether observed or theorized transcend human spaces and timescales by orders of magnitude Yet many scientists have been interested not just in the events that have occurred millennia before Earth s inception but also in their very own society here and now Since the first half of the twentieth century an increasing number of them have pursued parallel careers as both academics and activists Besides publishing peer reviewed papers they have promoted a great variety of underrepresented groups within their discipline Through conferences newsletters and social media they have sought to advance the interests of women members of racial and ethnic minorities LGBTQ and disabled people While these activists have differed in the identities they focus on they have come to share a conviction that diversity and inclusion are crucial for scientific excellence as well as social justice In this book you will read of the biographies and institutional contexts of key agents in the diversification of modern astronomy As most are recent figures whose discoveries have not been commemorated by Nobel Prizes they are relatively unknown among historians of science They have however been central to discussions about who has privileged access to the tools of astronomical inquiry including powerful telescopes and extensive databases As such they have also significantly shaped views of our universe **The Most Influential Women in STEM** Barbara Allman,2018-07-15 The stories of the many women who excel in STEM fields despite real obstacles need to be told This book assembles profiles of Nobel Laureates as well as those who were overlooked It introduces the reader to women who received encouragement from their families and of those who had to fight for an education It tells of the successes of women held in high regard by male colleagues and of those scorned Their stories will embolden the next generation of female leaders in STEM and enlighten the males who will be there working alongside them **On a Mission** Valerie Neal,2025-10-28 The definitive history of all 61 American women astronauts that s perfect for fans of The Six eager for more Sally Ride became a

household name as the first American woman in space but scores of equally impressive women have also left their mark in space. On a Mission: The Smithsonian History of US Women Astronauts spans 45 years and 61 astronauts to share the epic journeys of women who made space for themselves in a male dominated field. Valerie Neal, emerita curator in the Department of Space History at the Smithsonian's National Air and Space Museum, offers a culturally insightful history of the experiences of women astronauts, the challenges they've faced, and their distinctive stories. Collectively, they've completed more than 100 space shuttle missions and more than 30 long duration stays on the International Space Station and Russian Space Station Mir, and they continue to prove themselves in present day space exploration efforts. The book includes 50 black and white photographs to complement the historical account. With its sweeping look from the first women astronauts to Christina Hammock Koch, assigned to the first crewed Artemis mission around the Moon, there is no comparably thorough book on America's women astronauts. On a Mission is an inspiring tribute to unsung women's history.

Astronomers' Library

Karen Masters, 2024-04-23. Indulge in this collection of the best astronomy books from the past 800 years. The Astronomers' Library is a rich history of astronomy and astrology publishing across Europe. This is a carefully selected arrangement of publications from all over the continent: Germany, France, Italy, Netherlands, Spain, and the UK. And of course, as the original world leader in astrology, the Middle East is featured with multiple books from Persia. Humankind has looked to the heavens since the dawn of time, wondering what is out there, as well as how everything works and originally who was responsible for it. Every tribe, race, and civilization has wondered about our place in the universe and what lies beyond and what lies within it, below our feet. Lately, attention has turned to the origins of the universe. From the turn of the millennium, knowledge and ideas were recorded first on tablets or rock, then in the form of simple manuscripts, and eventually in a much more elaborate fashion as illustrative and engraving skills evolved. The advent of printed books saw the production of highly illustrated tomes that showed off the skills of the printers as well as the newfound knowledge of the scholars and artists that wrote them. Many of these works pushed the boundaries of illustrated publishing and continue to do so to this day. They commanded expert illustrators and skilled engravers and hence didn't come cheaply. They were treasured in the libraries of the wealthy, and their intrinsic worth has meant that there is an incredible wealth of beautifully preserved historic examples from the 14th century onwards. The significant difference we acknowledge today between astronomy and astrology has a relatively recent past, and the stars have long been associated with creatures, gods, characters, and all sorts of divine beings. The study of such has a long fascinating history that is shown in beautiful detail in the pages of these many beautiful books, and the transition from seeing the stars as characters to understanding them as spinning celestial beings and part of our huge universe is akin to witnessing the history of the world. As far back as the tenth century, Persian scholars such as Abd al Rahman al Sufi were recording his findings, observations, and speculations on the wider universe in his Book of Fixed Stars. The focus turned to Europe in the Middle Ages with Germany, Holland, and England the centres of study and publication. Following the Copernican Revolution,

observation and study underwent a radical change paving the way for astronomers such as Kepler Galilei and Newton to shed further light on the nature of the planets and stars of our known systems and the ground beneath our feet Each of those famous names contribute to the illustrated books that are featured within *Monthly Notes of the Astronomical Society of Southern Africa* Astronomical Society of Southern Africa,1993
