Asymmetries In Time Problems In The Philosophy Of Science Bradford S:

Asymmetries In Time Paul Horwich,1987-04-01 Time is generally thought to be one of the more mysterious ingredients of the universe In this intriguing book Paul Horwich makes precise and explicit the interrelationships between time and a large number of philosophically important notions Ideas of temporal order and priority interact in subtle and convoluted ways with the deepest elements in our network of basic concepts Confronting this conceptual jigsaw puzzle Horwich notes that there are glaring differences in how we regard the past and future directions of time For example we can influence the future but not the past and can easily gain knowledge of the past but not of the future Moreover we see a profusion of decay processes but little spontaneous generation of order time appears to flow in one privileged direction not the other and we tend to explain phenomena in terms of antecedent circumstances rather than subsequent ones Horwich explains such time asymmetries and examines their bearing on the nature of time itself *Asymmetries in Time* covers many notoriously difficult problems in the philosophy of science causation knowledge entropy explanation time travel rational choice including Newcomb s problem laws of nature and counterfactual implication and gives a unified treatment of these matters The book covers an unusually broad range of topics in a lucid and nontechnical way and includes alternative points of view in the philosophical literature

Toward a Directionalist Theory of Space H. Scott Hestevold, 2020-07-02 In *Toward a Directionalist Theory of Space* On Going Nowhere H Scott Hestevold formulates a new relationalist theory of space by appealing to the view that the universe is directioned in the sense that there exist directional relations a class of spatial relations that Leibniz overlooked Extending the directionalist relationalist theory of space to the problem of when it is that discrete objects compose a whole Hestevold revisits his answer to the Special Composition Question He also uses the directionalist relationalist theory to formulate reductivist theories of boundaries and holes theories that may allow one to resist the view that boundaries and holes are ontologically parasitic entities Finally he explores directionalism relationalism vis vis spacetime After noting findings of modern physics that favor substantivalist spacetime and then developing metaphysical concerns that favor instead directionalist relationalist spacetime Hestevold notes the ontological benefit of endorsing spatiotemporal directional relations even if spacetime substantivalism is the winning theory
