**Enterprises, Industry and Innovation in the People's Republic of China** Alberto Gabriele, 2020-04-06 This book analyses and critically evaluates the development of two key components of China's economy the network of productive enterprises and the national innovation system from the inception of market oriented reforms to the present day The approach is a partly novel one albeit inspired to classical political economy rooted in the structure and evolution of social relations of production and exchange and of the institutional setting in these two crucial domains The main findings are

twofold First the role of planning and public ownership far from withering has being upheld and qualitatively enhanced especially throughout the most recent stages of industrial reforms Second enterprises are increasingly participating along with universities and research centers in a concerted and historically unparalleled effort to dramatically upgrade China's capacity to engage in indigenous innovation As a result China's National Innovation System has been growing and strengthening at a pace much faster than that of the national economy as a whole The book also presents a speculative and provisional perspective on the validity and meaning of the claim that the country's socioeconomic system is indeed a form of socialism with Chinese characteristics It will be of interest to students and scholars researching China politics and development economics

**Global Technology and Legal Theory** Guilherme Cintra Guimarães,2019-06-05 The rise and spread of the Internet has accelerated the global flows of money technology and information that are increasingly perceived as a challenge to the traditional regulatory powers of nation states and the effectiveness of their constitutions The acceleration of these flows poses new legal and political problems to their regulation and control as shown by recent conflicts between Google and the European Union EU This book investigates the transnational constitutional dimension of recent conflicts between Google and the EU in the areas of competition taxation and human rights More than a simple case study it explores how the new conflicts originating from the worldwide expansion of the Internet economy are being dealt with by the institutional mechanisms available at the European level The analysis of these conflicts exposes the tensions and contradictions between on the one hand legal and political systems that are limited by territory and on the other hand the inherently global functioning of the Internet The EU s promising initiatives to extend the protection of privacy in cyberspace set the stage for a broader dialogue on constitutional problems related to the enforcement of fundamental rights and the legitimate exercise of power that are common to different legal orders of world society Nevertheless the different ways of dealing with the competition and fiscal aspects of the conflicts with Google also indicate the same limits that are generally attributed to the very project of European integration showing that the constitutionalization of the economy tends to outpace

the constitutionalization of politics Providing a detailed account of the unfolding of these conflicts and their wider consequences to the future of the Internet this book will appeal to scholars working in EU law international law and constitutional law as well as those in the fields of political science and sociology Productivity Convergence Edward N.
