the second volume of the Community Series in Novel Biomarkers for Predicting Response to Cancer Immunotherapy Please see Volume I here Immunotherapy has revolutionized the treatment of malignancies Targeting of immune checkpoints cytotoxic T lymphocyte associated protein 4 programmed cell death protein 1 PD 1 and its ligand PD L1 has led to improving survival in a subset of patients Despite their remarkable success clinical benefit remains limited to only a subset of patients A significant limitation behind these current treatment modalities is an irregularity in clinical response which is especially pronounced among checkpoint inhibition Currently relevant predictors of cancer immunotherapy response include microsatellite instability high deficient mismatch repair MSI H dMMR expression of PD L1 tumor mutation burden TMB immune genomic characteristics and tumor infiltrating lymphocytes TILs However none of them have sufficient evidence to be a stratification factor Moreover as the combined strategies for effective cancer immunotherapy had been developed in multiple tumors such as Immunotherapy combined with chemotherapy radiotherapy targeted therapy and anti angiogenesis therapy Therefore the development of novel biomarkers endowed with high sensitivity specificity and accuracy able to identify which patients may truly benefit from the treatment with cancer immunotherapy would allow to refine the therapeutic selection and to better tailor the treatment strategy This research topic aims to focus on the advances in the discoveries of novel biomarkers for predicting response to cancer immunotherapy in various tumors We welcome the submission of original research and review articles that include biomarkers in clinical study and applications as well as technologies or discoveries in experimental approaches

Principles of Dialysis Access Karl A. Illig, Larry A. Scher, John R. Ross, 2024-11-26 This multidisciplinary textbook has been written and edited by multiple experts in the field to explore and define the management strategies for all types of dialysis access With kidney failure a major public health problem worldwide and the care of these patients being widely regarded as suboptimal in the conventional surgical and interventional world this reference combines the experience and knowledge of a world renowned team of surgeons interventionalists and nephrologists to definitively address this topic without regard to specialty Principles of Dialysis Access provides a thorough review of the management of all types of access for patients requiring dialysis It is designed for access surgeons interventional radiologists interventional nephrologists nephrologists and all others specializing in dialysis access As the only comprehensive multi author interdisciplinary textbook on this topic it is essential reading for all who specialize in this field

Elements of Chemical Reaction Engineering H. Scott Fogler, Bryan R.

Goldsmith, Eranda Nikolla, Nirala Singh, 2025-03-19 The Essential Textbook for Mastering Chemical Reaction Engineering Now Fully Updated with Expanded Coverage of Electrochemical Reactors H Scott Fogler's Elements of Chemical Reaction Engineering now in its seventh edition continues to set the standard as the leading textbook in chemical reaction engineering. This edition coauthored by Bryan R Goldsmith, Eranda Nikolla, and Nirala Singh still offers Fogler's engaging and active learning experience with updated content and expanded coverage of electrochemical reactors. Reflecting current theories and practices and with a continuing emphasis on safety and sustainability, this edition includes expanded sections on molecular simulation methods, analysis of experimental reactor data, and catalytic reactions. Leveraging the power of Wolfram, Python, POLYMATH, and MATLAB, students can explore the intricacies of reactions and reactors through realistic simulation experiments. This hands-on approach allows students to clearly understand the practical applications of theoretical concepts. This book prepares undergraduate students to apply chemical reaction kinetics and physics to the design of chemical reactors. Advanced chapters cover graduate-level topics including diffusion and reaction models, residence time distribution, and tools to model non-ideal reactors. The seventh edition includes an expanded section on molecular simulation methods and potential energy surfaces. Updated examples of experimental reactor data and its analysis. Detailed discussion of definitions in catalysis and examples of catalytic reactions. Additional examples and an expanded section on surface reaction mechanisms and microkinetic modeling. A new chapter on electrochemical reactors with example problems reflecting the growing importance of this field in renewable energy and industrial processes. About the Companion Web Site: umich.edu/elements/7e/index.html. Comprehensive PowerPoint slides for lecture notes for chemical reaction engineering classes. Links to additional software including POLYMATH™, MATLAB™, Python, Wolfram, Mathematica™, AspenTech™, and COMSOL™. Interactive learning resources linked to each chapter including Learning Objectives, Summary Notes, Web Modules, Interactive Computer Games, Solved Problems, FAQs, additional homework problems, and links to LearnChemE and other resources. Living Example Problems provide interactive simulations allowing students to explore the examples and ask what-if questions. Professional Reference Shelf which includes advanced content on reactors, weighted least squares, experimental planning, pharmacokinetics, detailed explanations of key derivations, and more. Redesigned Web site to increase accessibility. Register your book for convenient access to downloads, updates, and/or corrections as they become available. See inside book for details.

Coronavirus Disease (COVID-19): Pathophysiology, Epidemiology, Clinical Management and Public Health Response, 2023-01-25 Volume I A. An outbreak of a respiratory disease first reported in Wuhan, China, in December 2019, and the causative agent was discovered in January 2020 to be a novel betacoronavirus of the same subgenus as SARS-CoV and named severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). Coronavirus disease 2019 (COVID-19) has rapidly disseminated worldwide with clinical manifestations ranging from mild respiratory symptoms to severe pneumonia and a fatality rate estimated around 2%. Person-to-person transmission is occurring both in the community and healthcare.

settings The World Health Organization WHO has recently declared the COVID 19 epidemic a public health emergency of international concern The ongoing outbreak presents many clinical and public health management challenges due to limited understanding of viral pathogenesis risk factors for infection natural history of disease including clinical presentation and outcomes prognostic factors for severe illness period of infectivity modes and extent of virus inter human transmission as well as effective preventive measures and public health response and containment interventions There are no antiviral treatment nor vaccine available but fast track research and development efforts including clinical therapeutic trials are ongoing across the world Managing this serious epidemic requires the appropriate deployment of limited human resources across all cadres of health care and public health staff including clinical laboratory managerial and epidemiological data analysis and risk assessment experts It presents challenges around public communication and messaging around risk with the potential for misinformation and disinformation Therefore integrated operational research and intervention learning from experiences across different fields and settings should contribute towards better understanding and managing COVID 19 This Research Topic aims to highlight interdisciplinary research approaches deployed during the COVID 19 epidemic addressing knowledge gaps and generating evidence for its improved management and control It will incorporate critical theoretically informed and empirically grounded original research contributions using diverse approaches experimental observational and intervention studies conceptual framing expert opinions and reviews from across the world The Research Topic proposes a multi dimensional approach to improving the management of COVID 19 with scientific contributions from all areas of virology immunology clinical microbiology epidemiology therapeutics communications as well as infection prevention and public health risk assessment and management studies
