Sen. Bernie Sanders, I-Vt., condemned a new advertisement from President Trump's reelection campaign that blamed Democrats for the deaths of any U.S. citizens at the hands of undocumented immigrants as "so sad for our country."

The advertisement, titled "Complicit," was released on the anniversary of Trump's inauguration, and hours into the government shutdown that resulted from the unresolved standoff over immigration reform. "Democrats who stand in our way will be complicit in every murder committed by illegal immigrants," the ad says.

On CNN's "State of the Union" Sunday morning, Sanders said it was "really unbelievable" that the president of the United States would say "such nonsense" and make "such outrageous statements."

Sanders is calling for the government to reopen as soon as possible, but said he will not vote for any funding bill that does not help people previously protected from deportation by the Deferred Action for Childhood Arrivals program (DACA), which Trump ended in September. The Trump administration has accused liberals like Sanders of "holding lawful citizens hostage over their demands for amnesty for illegal immigrants."

The former Democratic presidential candidate cited polls by CNN and CBS that found that a majority of Americans believe that the so-called "Dreamers," who came into the United States illegally as children, should be given a chance to obtain legal status.

"They need a path towards citizenship. That's not my view. That is the overwhelming view of the American people. Then you see a president put stuff like that on the air trying to divide us up, trying to foment hatred? It is — it is really sad," Sanders told CNN anchor Jake Tapper.

Sanders strongly criticized the administration's threat to deport the roughly 800,000 young people protected by the Obama-era executive action. "Let me say this," he said. "If we allow Trump to get away with what he did — and that is, repeal the executive order on DACAs — and if these 800,000 people, young people, are subjected to deportation, this will be one of the ugliest stains in the history of the United States."

The advertisement, however, does not specifically address the DACA issue. The short video focuses on Luis Bracamontes, a Mexican citizen living illegally in the United States, who murdered two Sacramento police officers in 2014, to justify Trump's proposed immigration policies: building a wall along the U.S.-Mexico border, deporting criminals and stopping illegal immigration.

When asked if Sanders would be willing to vote for the construction of a border wall if Republicans offered a pathway to citizenship for the "dreamers," he said, "It's something — look, I think the wall was a great idea in the 15th century, when the Chinese built the Great China Wall. I don't think it makes a whole lot of sense now. But I'm willing to sit

Research Design and Statistical Analysis Jerome L. Myers, Arnold D. Well, Robert F. Lorch Jr, 2013-01-11 Research Design and Statistical Analysis

provides comprehensive coverage of the design principles and statistical concepts necessary to make sense of real data. The book's goal is to provide a strong conceptual foundation to enable readers to generalize concepts to new research situations. Emphasis is placed on the underlying logic and assumptions of the analysis and what it tells the researcher the limitations of the analysis and the consequences of violating assumptions. Sampling design efficiency and statistical models are emphasized throughout. As per APA recommendations, emphasis is also placed on data exploration, effect size measures, confidence intervals, and using power analyses to determine sample size. Real world data sets are used to illustrate data exploration, analysis, and interpretation. The book offers a rare blend of the underlying statistical assumptions, the consequences of their violations, and practical advice on dealing with them.

Changes in the New Edition

Each section of the book concludes with a chapter that provides an integrated example of how to apply the concepts and procedures covered in the chapters of the section. In addition, the advantages and disadvantages of alternative designs are discussed. A new chapter 1 reviews the major steps in planning and executing a study and the implications of those decisions for subsequent analyses and interpretations. A new chapter 13 compares experimental designs to reinforce the connection between design and analysis and to help readers achieve the most efficient research study. A new chapter 27 on common errors in data analysis and interpretation. Increased emphasis on power analyses to determine sample size using the G Power 3 program. Many new data sets and problems. More examples of the use of SPSS PASW Version 17, although the analyses exemplified are readily carried out by any of the major statistical software packages. A companion website with the data used in the text and the exercises in SPSS and Excel formats. SPSS syntax files for performing analyses. Extra material on logistic and multiple regression. Technical notes that develop some of the formulas and a solutions manual and the text figures and tables for instructors only.

Part 1 reviews research planning, data exploration, and basic concepts in statistics, including sampling, hypothesis testing, measures of effect size, estimators, and confidence intervals.

Part 2 presents between-subject designs. The statistical models underlying the analysis of variance for these designs are emphasized, along with the role of expected mean squares in estimating effects of variables, the interpretation of interactions, and procedures for testing contrasts and controlling error rates.

Part 3 focuses on repeated measures designs and considers the advantages and disadvantages of different mixed designs.

Part 4 presents detailed coverage of correlation and bivariate and multiple regression, with emphasis on interpretation and common errors, and discusses the usefulness and limitations of these procedures as tools for prediction and for developing theory. This is one of the few books with coverage sufficient for a 2-semester course sequence in experimental design and statistics as taught in psychology education and other behavioral, social, and health sciences. Incorporating the analyses of both experimental and observational data provides continuity of concepts and notation.

Prerequisites include courses on basic research methods and statistics. The book is also an excellent resource for practicing researchers.
