The contributors to this volume include many of the distinguished researchers in this area Many of these scholars have collaborated with Joseph McKean to develop underlying theory for these methods obtain small sample corrections and develop efficient algorithms for their computation The papers cover the scope of the area including robust nonparametric rank based procedures through Bayesian and big data rank based analyses Areas of application include biostatistics and spatial areas Over the last 30 years robust rank based and nonparametric methods have developed considerably These procedures generalize traditional Wilcoxon type methods for one and two sample location problems Research into these procedures has culminated in complete analyses for many of the models used in practice including linear generalized linear mixed and nonlinear models Settings are both multivariate and univariate With the development of R packages in these areas computation of these procedures is easily shared with readers and implemented This book is developed from the International Conference on Robust Rank Based and Nonparametric Methods held at Western Michigan University in April 2015      **Statistical Methods, Computing, and Resources for Genome-Wide Association Studies** Riyan Cheng,Lide

**Photonic Integration and Photonics-Electronics Convergence on Silicon Platform** Koji Yamada,Jifeng Liu,Toshihiko Baba,Laurent Vivien, Dan-Xia Xu,2015-11-10 Silicon photonics technology which has the DNA of silicon electronics technology promises to provide a compact photonic integration platform with high integration density mass producibility and excellent cost performance This technology has been used to develop and to integrate various photonic functions on silicon substrate Moreover photonics electronics convergence based on silicon substrate is now being pursued Thanks to these features silicon photonics will have the potential to be a superior technology used in the construction of energy efficient cost effective apparatuses for various applications such as communications information processing and sensing Considering the material characteristics of silicon and difficulties in microfabrication technology however silicon by itself is not necessarily an ideal material For example silicon is not suitable for light emitting devices because it is an indirect transition material The resolution and dynamic range of silicon based interference devices such as wavelength filters are significantly limited by fabrication errors in microfabrication processes For further performance improvement therefore various assisting materials such as indium phosphide silicon nitride germanium tin are now being imported into silicon photonics by using various heterogeneous integration technologies such as low temperature film deposition and wafer die bonding These assisting materials and heterogeneous integration technologies would also expand the application field of silicon photonics technology Fortunately silicon photonics technology has superior flexibility and robustness for heterogeneous integration Moreover along with photonic functions silicon photonics technology has an ability of integration

of electronic functions In other words we are on the verge of obtaining an ultimate technology that can integrate all photonic and electronic functions on a single Si chip This e Book aims at covering recent developments of the silicon photonic platform and novel functionalities with heterogeneous material integrations on this platform Work on Atomic Physics (1912 - 1917)
