to Problems of the Uncertainty Principle Alexei Poltoratski,2015-03-07 The Uncertainty Principle in Harmonic Analysis UP is a classical yet rapidly developing area of modern mathematics Its first significant results and open problems date back to the work of Norbert Wiener Andrei Kolmogorov Mark Krein and Arne Beurling At present it encompasses a large part of mathematics from Fourier analysis frames and completeness problems for various systems of functions to spectral problems for differential operators and canonical systems These notes are devoted to the so called Toeplitz approach to UP which recently brought solutions to some of the long standing problems posed by the classics After a short overview of the general

area of UP the discussion turns to the outline of the new approach and its results Among those are solutions to Beurling's Gap Problem in Fourier analysis the Type Problem on completeness of exponential systems a problem by P. Iyengar and Levinson on sampling sets for entire functions Bernstein's problem on uniform polynomial approximation problems on asymptotics of Fourier integrals and a Toeplitz version of the Beurling-Malliavin theory One of the main goals of the book is to present new directions for future research opened by the new approach to the experts and young analysts A co-publication of the AMS and CBMS
